Veja o que banana faz com metabolismo lento!

Dá uma olhada nesse intestino da mesma paciente, com doze semanas de diferença. Na primeira imagem, o intestino está com disbiose e o corpo todo inflamado deixando o metabolismo travado.

Na segunda imagem, o intestino está saudável, o corpo está desinflamado, desinchado e queimando gordura naturalmente.

O segredo? Um ritual simples que ela começou a fazer de manhã.

Antes de chegar no meu consultório, ela achava que a barriga que não desinchava e o cansaço crônico eram culpa da idade ou da menopausa.

Ela fazia tudo "certo". Cortou carboidrato, tentou jejum intermitente e suava na academia. Mas a calça continuava apertada.

E os médicos diziam a mesma coisa de sempre: "coma menos, se mexa mais, seus exames de rotina estão normais".

O que nenhum deles investigou é que o culpado nunca foi a falta de disciplina dela, mas sim da disbiose intestinal que ela sofria, que nada mais é do que um desequilíbrio na flora de bactérias no intestino que pode causar problemas digestivos e outras doenças.

Essa disbiose, foi provocada por uma proteína que o próprio corpo estava fabricando em excesso chamada zonulina.

A zonulina estava abrindo as junções da parede do intestino dela, deixando toxinas vazarem direto para o sangue 24 horas por dia.

O corpo entra em desespero, dispara uma inflamação subclínica, mantém o cortisol e a insulina altos e trava toda a queima de gordura abdominal. A verdade é que dieta restritiva não trata intestino inflamado.

Foi por isso que eu apliquei com nela o Protocolo SER: Silenciar, Expurgar e Recolonizar.

Em poucos dias, a inflamação despencou e o corpo voltou a eliminar o excesso de peso.

Eu liberei uma apresentação gratuita onde eu explico como aplicar o protocolo SER em casa mesmo para combater a zonulina e tratar o intestino inflamado. Clique no link e assista antes que saia do ar.

Eu imploro a todas as pessoas que sofrem com intestino preso que vejam isso!

Veja o que o magnésio faz com o seu intestino.

Se você precisa passar o papel higiênico mais de quatro vezes depois de fazer cocô, aqui está o motivo.

Quando o cocô endurecido fica preso nas ranhuras do seu cólon, as fezes líquidas vazam ao redor dele. É isso que causa aquele vazamento constante que faz você se limpar repetidas vezes, às vezes até deixando manchas constrangedoras na sua roupa íntima.

Isso é conhecido como escape fecal, e é um sinal de que você pode ter 7 quilos de cocô preso dentro de você agora mesmo, vazando toxinas para o seu sangue, estufando a sua barriga e danificando lentamente o seu intestino de dentro para fora.

Então, como você limpa todo esse cocô preso antes que isso leve a problemas ainda maiores?

Bem, faça isso para limpar o cocô preso rápido. Fibra ajuda você a fazer cocô, certo? Não. E beber muita água? Não. Tomar laxantes mais fortes? Não. Faça isso para limpar o cocô preso rápido.

É meio surpreendente, mas o limpa-limpa sem fim, a prisão de ventre e o inchaço não têm quase nada a ver com a quantidade de fibras que você come, a água que você bebe ou o quanto você se movimenta em um dia.

Na verdade, tem a ver com uma proteína que o seu próprio corpo produz em excesso nas profundezas do seu intestino. Nós nos referimos a ela como Zonulina. Ela abre as junções da parede intestinal, paralisa o seu cólon e faz com que o cocô fique preso.

Felizmente, existe uma maneira simples de bloquear a Zonulina assim que você entende o que realmente está acontecendo. E não são antibióticos, probióticos, um detox ou algo do tipo.

A questão é a seguinte: quando o cólon está funcionando como deveria, ele empurra o cocô para fora através de um processo de contração chamado peristaltismo, da mesma forma que você espreme a pasta de dente de um tubo.

No entanto, o excesso de Zonulina interrompe completamente esse processo. Ela rasga a barreira do seu intestino, o que dispara uma inflamação que retarda e, em alguns casos, paralisa os mesmos músculos responsáveis por empurrar o cocô pelo seu sistema.

Então, o cocô fica preso em vez de ser empurrado para fora.

Pior, ele gruda no cocô mais novo como um velcro até que você tenha 5, 7 ou até 9 quilos de cocô preso dentro do seu cólon, causando prisão de ventre grave e um inchaço doloroso.

Então, o que você faz? Bem, não é se entupindo de copos de psyllium ou outras fibras, porque isso piora as coisas.

Porque a fibra apenas adiciona volume e peso ao cocô que já está preso. E isso é como adicionar mais carros a um engarrafamento.

E também não são laxantes, engolir psyllium à força ou beber muita água, porque nenhuma dessas coisas ataca o verdadeiro problema: o estrago causado pela Zonulina.

Você precisa desparalisar o seu cólon, fechar as fendas do intestino e fazê-lo empurrar o cocô para fora novamente. Se não fizer isso, sua prisão de ventre continuará voltando, não importa o que você tente.

É por isso que eu, Eduardo Claas, nutricionista e naturopata, criei o Protocolo SER.

Presta atenção nisso. Pode parecer surpreendente, mas o colesterol alto e a gordura no fígado não têm a ver com o que você come. Têm a ver com o que o seu fígado não consegue eliminar.

A maioria das pessoas acham que o colesterol alto vem do que se come, mas a alimentação não é o único fator, a verdade é que o seu próprio corpo produz cerca de 80% dele.

O problema não é produzir demais. O problema é que o seu fígado está sobrecarregado, cheio de gordura, e parou de fazer a faxina.

Ele deveria pegar o excesso de colesterol do sangue e jogar fora. Pense no seu fígado como um caminhão de lixo. Quando o caminhão quebra, o lixo se acumula nas ruas. Essas ruas são as suas artérias.

É por isso que o seu colesterol não baixa de jeito nenhum, e é exatamente por isso que você acorda exausto, arrastando um cansaço e uma fadiga crônica o dia inteiro. O seu corpo está intoxicado.

Então, o que você faz? Bem, não é cortando os ovos ou a manteiga. Se você fizer isso, a sua biologia simplesmente produz mais colesterol para compensar o que você cortou. E as estatinas? Elas até freiam a produção, mas não consertam o caminhão de lixo. O lixo continua acumulando e a fadiga só piora.

Fazer mais exercícios? Ajuda um pouco, mas a esteira não conserta um fígado engordurado. Cortar gorduras, tomar pílulas, se matar na academia... nada disso conserta um caminhão de lixo quebrado. É por isso que os seus exames nunca melhoram.

Mas existe um caminho mais inteligente. O que os médicos tradicionais não te contam é que o seu fígado só fica engordurado e sobrecarregado porque o seu intestino está vazando toxinas para ele o dia inteiro, por causa de uma proteína chamada Zonulina.

É por isso que eu, Eduardo Claas, nutricionista e naturopata há mais de 16 anos, criei o Protocolo SER.

Eu fui um dos primeiros especialistas no Brasil a defender o fato de que todas as doenças começam no intestino, inclusive o colesterol alto e a gordura no fígado.

Por isso, eu gravei uma apresentação gratuita mostrando como esse ritual matinal simples faz o seu fígado voltar a limpar o colesterol e queimar a gordura naturalmente, devolvendo a sua energia, saúde e disposição.

Então, se você está acima do peso e não consegue emagrecer, se vive exausto e está cansado de dietas restritivas e de ter que tomar remédios diariamente, clique no botão abaixo e assista o vídeo antes que saia do ar.

Já tentei de tudo, mas não consigo emagrecer e manter meu peso. Esse método vai me ajudar?
Certamente!

Pois esse método não vai somente te auxiliar no emagrecimento, como também irá acelerar o seu metabolismo, melhorar o seu humor, aumentar sua autoestima, disposição e até mesmo ajudar a eliminar alguns problemas de saúde.

Você não vai precisar usar medicamento perigoso ou ir diariamente para a academia e nem se alimentar de migalhas. Tudo o que você vai precisar é regular algo que já está dentro de você em abundância. Eu estou falando das suas bactérias, da sua microbiota intestinal, que quando reguladas, podem fazer milagres por todo o seu corpo.

Eu me chamo Eduardo Claas, sou nutricionista e naturopata há mais de 17 anos e eu já ajudei homens e mulheres de todas as idades a atingir um peso saudável através desse método inovador. Agora chegou a sua vez de melhorar a saúde. Clique no link aqui abaixo.

Se você ignorar isso, provavelmente não vai conseguir emagrecer. O segredo para alcançar emagrecimento saudável e eficaz não está nas restrições eternas, até porque elas podem te prejudicar a longo prazo, te levando a ganhar todo o peso perdido ou até muito mais.

A verdade é que você precisa povoar o seu intestino de bactérias boas para que elas trabalhem a favor do seu corpo e acelerando o seu metabolismo. Essa prática resultará também na melhora da sua saúde e o emagrecimento saudável virá como um bônus.

Me chamo Eduardo Claas, sou nutricionista e naturopata e eu quero te ajudar a regular sua microbiota intestinal de uma maneira saudável e totalmente natural. Se você quer virar a chave da sua vida e ter mais saúde, é só clicar no link abaixo.

Se você vive se sentindo cansado, tem aquela sensação de corpo inchado e quer eliminar aqueles 10 quilos que estão pesando no seu dia-a-dia, você precisa de uma solução mais simples e possível para resolver isso rápido.

Eu não estou falando de dietas malucas ou remédios caros que a longo prazo podem prejudicar sua saúde. Veja bem, 80% de todas as principais doenças humanas são mediadas por inflamação. Portanto, os sintomas que você está sentindo agora tem grandes chances de vir de uma inflamação crônica.

Eu sou Eduardo Claas, nutricionista e naturopata há mais de 16 anos, e eu já ajudei mais de 70 mil pessoas a entrarem em forma e diminuir uma série de problemas relacionados à inflamação crônica, diabetes, entre outros. Te convido a assistir à apresentação completa na próxima tela. Clique no link

Se você tem interesse em emagrecer, você precisa saber a semelhança entre este papel pegando fogo e o seu metabolismo.

Muitas pessoas acreditam que comer pouco e se exercitar muito é a única forma de perder peso, mas uma revelação científica pode derrubar muitas teorias populares que você conhece sobre a perda de peso.

Cientistas nos Estados Unidos, Irlanda e Holanda descobriram há pouco tempo atrás que existem bactérias capazes de ajudar você a entrar no peso ideal sem grandes esforços. Sim, são bactérias. E ao contrário do que você pensa, elas não são fontes de doenças.

Elas podem, entre muitas coisas boas, ajudar pessoas com dificuldades em perder peso. E assim como o papel pegando fogo, o seu metabolismo pode acelerar e ser um grande aliado na perda de

Se você quer entender mais sobre essa novidade, eu preparei uma apresentação onde eu revelo todos os detalhes. Aperte no link e saiba mais.

D3F04 - <https://youtu.be/ueYnSUPuXSg>

Existe um novo órgão recém-descoberto pelos cientistas que pode ajudar qualquer pessoa a se livrar do excesso de peso.

E ao contrário do que se pensa, bactérias não são apenas fonte de doença. Elas podem ajudar a limpar o seu organismo e acelerar o metabolismo, promovendo uma perda de peso saudável e consistente.

E diversos estudos, como esse feito nos Estados Unidos, mostram que isso pode ser a grande diferença entre pessoas que comem pouco e engordam, daquelas que se alimentam bem e não se preocupam com a balança.

E o melhor, qualquer pessoa pode tirar proveito dessa descoberta e entrar no peso ideal sem sacrifícios desnecessários.

Não importa quantos métodos, dietas, exercícios ou remédios para emagrecer você ou alguém que você conheça já tenha usado.

Isso é completamente novo e, inclusive, já está ajudando milhares de pessoas a entrar no peso ideal.

Clique no link que está em algum lugar desse vídeo e assista na apresentação uma das maiores novidades desta década sobre saúde e emagrecimento.

Perder barriga é um dos grandes desejos da maioria das pessoas. Mas por que parece tão difícil alcançar esse objetivo? A resposta pode surpreender você.

Na verdade, isso está ligado com algo que você possui em muito maior quantidade do que células no seu corpo: são as bactérias.

Sim, segundo estudos, o ser humano possui cerca de nove vezes mais bactérias do que células no corpo.

Mas isso não significa nada de ruim, pois ao contrário do que muitas pessoas pensam, as bactérias podem ser, sim, suas grandes aliadas na redução saudável do peso.

Meu nome é Eduardo Claas, sou nutricionista e naturopata, e já ajudei mais de 8.000 pessoas a entrarem no peso saudável sem grandes sacrifícios.

Pilhas de estudos científicos recentes, como este publicado pelo Instituto Nacional de Biotecnologia dos Estados Unidos, mostram a importância das bactérias na sua saúde e bem-estar.

Agora eu quero mostrar a você como usar o poder das bactérias emagrecedoras de forma natural e segura. Clique no link e descubra os três passos práticos que vão ajudar você a entrar no peso ideal no conforto da sua casa.

Se você quer perder barriga, veja isso. Um importante físico holandês chamado Ruben Meerman, que também é surfista e mora na Austrália desde os 8 anos, vem realizando um trabalho encantador que ensina ciências para crianças.

O programa é sucesso absoluto na TV ABC australiana. Um dia, ele foi fotografado surfando e ficou incomodado com a barriginha.

O problema é que quanto mais as bactérias ruins se alimentam, mais elas se multiplicam e fermentam o seu organismo, causam inchaço, desconfortos e até travam o seu metabolismo, fazendo com que você engorde mesmo comendo pouco.

E eu descobri, nesses 16 anos estudando e atendendo mais de 10 mil pessoas no consultório e mais de 60 mil pessoas com minhas orientações online, que há muitos mitos que prejudicam o

Por isso eu criei o método RAM, que te ajuda a eliminar até 84% da gordura, reduzindo a compulsão alimentar e acelerando o metabolismo, sem depender de remédios. Clique abaixo e assista a apresentação completa!

D3F284 - <https://youtube.com/shorts/gdPsjuR8Mk0>

Aqui está o texto limpo, sem as marcações de tempo:

Mas mesmo assim, eu não conseguia emagrecer. Essas foram as palavras da Laura, de 43 anos. Há anos, ela queria perder peso, mas não importa o que ela tentava, ela sentia que o seu metabolismo estava cada vez mais lento, as roupas mais apertadas e a autoestima lá no chão.

Me chamo Eduardo Claas, sou nutricionista e naturopata há mais de 16 anos. E todos os dias eu vejo casos similares de pessoas que tentam de tudo para perder peso e ficam cada vez mais frustradas por não conseguir. E é por isso que eu estou aqui hoje.

Existe uma outra forma inteligente de alcançar os resultados que você tanto busca. Eu estou falando das bactérias que habitam o seu sistema digestório.

Vários estudos já mostraram que as bactérias são tão importantes como os hormônios para quem quer emagrecer, que ajudam a reprogramar suas bactérias sem sair de casa e sem tomar nenhum remédio perigoso.

UIGA001 H2 (Abraão-Marcos) - FacebookMeuFluxo

Hook 02: Seria controverso você levar uma pancada na cabeça e no outro dia agradecer por isso ter acontecido né? Bom foi isso que aconteceu...

Corpo da copy: Após uma pancada violenta na cabeça, o cérebro de Jason não quebrou... ele 'religou'.

Jason era um cara normal que saia pra beber com os amigos, treinava e estava sempre atrás de mulheres... até que depois de sair de um bar, foi atacado e sofreu uma pancada forte na cabeça.

Literalmente do dia pra noite tudo mudou na vida dele...

Ele passou a enxergar fórmulas matemáticas na natureza sem nunca ter estudado e hoje ele é considerado um gênio, pois faz cálculos que quase ninguém consegue.

A prova lógica é assustadora: o trauma removeu a trava biológica que mantinha seu cérebro lento... isso prova que o potencial de um gênio já está aí dentro de você, agora, apenas aguardando o comando certo para ser ativado.

Como neurocirurgião e ex-professor de medicina, eu estudei o mecanismo por trás dessa genialidade repentina. O que aconteceu foi uma Integração Hemisférica forçada.

E o que era pra ser trágico virou um dom.

O impacto criou uma ponte elétrica ultraveloz entre o lado lógico e o criativo, permitindo que ele acessasse dados que 99% das pessoas morrerão sem sequer saber que existem.

A boa notícia é que existe um processo de integração hemisférica, que eu refinei em anos de prática clínica, capaz de gerar uma supermemória, aprendizagem acelerada e aumento da reserva cognitiva que combate o Alzheimer, algo que poucos no mundo conhecem.

Eu quero que você descubra como usar esse mesmo mecanismo para ler um livro e nunca mais esquecer, ou para dominar novas habilidades em semanas, protegendo sua mente e garantindo que ela nunca mais te deixe na mão, independente da sua idade.

Se você tem entre 18 a 90 anos e quer fortalecer a memória, aprender pelo menos 2x mais rápido e aumentar a reserva cognitiva do cérebro pra proteger você do declínio que causa demência, esquecimentos e até Alzheimer.

Toque no botão abaixo agora e veja como aplicar essa mesma estratégia na sua vida.

UIGA005 H1 (Samuca-Marcos) - FacebookMeuFluxo

Hook 01: Os médicos ficaram horrorizados: o cérebro desta freira de 101 anos estava fisicamente destruído pelo Alzheimer, mas ela morreu com a lucidez de uma jovem de 20.

Esta freira morreu aos 101 anos com uma mente tão lúcida quanto a de uma jovem de 20. O nome dela era Irmã Mary e o que os médicos descobriram dentro do crânio dela após a sua morte chocou a comunidade científica mundial e mudou tudo o que sabíamos sobre o Alzheimer.

Corpo da copy: Ao realizarem a autópsia, os patologistas ficaram horrorizados: o cérebro da Irmã Mary estava fisicamente devastado por placas de Alzheimer em estágio avançado. Pela lógica da medicina tradicional, ela não deveria sequer lembrar o próprio nome. No entanto, até o seu último suspiro, ela mantinha uma memória impecável e uma capacidade de raciocínio invejável.

A resposta é uma descoberta que eu, como neurocirurgião, trato como a 'blindagem definitiva' da mente: a Reserva Cognitiva.

A Irmã Mary não 'curou' o Alzheimer; ela simplesmente construiu tantas rotas neurais alternativas através da Integração Hemisférica que o seu cérebro aprendeu a desviar das áreas doentes.

Ela criou uma super-rodovia de informações que permitia que sua consciência continuasse brilhando, mesmo enquanto seu cérebro físico sofria ataques.

O problema é que ninguém te ensina como construir essa 'poupança cerebral'. Pelo contrário, o estilo de vida moderno e a falta de estímulos cruzados fazem com que suas conexões murchem precocemente, deixando você vulnerável ao apagamento mental muito antes da hora.

Eu refinei o mecanismo usado por mentes resilientes como a da Irmã Mary em um protocolo de 15 minutos que força o seu cérebro a criar novas pontes elétricas todos os dias, sem sair de casa...

Eu quero te mostrar como 'blindar' o seu córtex e garantir que, independente da sua genética ou da sua idade, a sua lucidez seja a última coisa a te abandonar.

Eu preparei uma apresentação onde revelo o passo a passo dessa construção de reserva cognitiva. Toque no botão abaixo agora para assistir.

UIGA021 H1 (Abraão-Marcos) - FacebookMeuFluxo

Gancho 01: Jake tem apenas 10 anos, mas ele possui um poder que a maioria de nós perdeu antes mesmo de nascer.

Corpo: Se você perguntar a ele o dia da semana de qualquer data nos últimos anos, ele não apenas responde em segundos... ele se transporta para lá. Para o Jake, lembrar não é ver uma foto antiga; é sentir o cheiro, o toque da roupa e a emoção exata daquele momento. É o que a ciência chama de Memória Hiper-Realista.

Você pode pensar: "Isso é um dom, ele nasceu assim". Mas e se eu te dissesse que o seu cérebro também tem essa capacidade instalada, mas ela está "desligada"?

Jake não é um gênio de outro planeta; ele apenas mantém ativos os circuitos que a maioria das pessoas deixa atrofiar por falta de estímulo.

Eu sou o Dr. Marcelo Roxo. Como neurocirurgião há 17 anos, e eu já estive literalmente "dentro" do cérebro humano em centenas de cirurgias. Eu vi a diferença física entre um hipocampo atrofiado e um cérebro que, como o do Jake, vive em estado de neuroativação constante.

O motivo pelo qual sua memória é "2D" e sem brilho, enquanto a do Jake é "viva", é um bloqueio biológico. Esse mecanismo faz com que o seu cérebro apague 95% das suas experiências para economizar energia.

Ele tranca a sua capacidade de "viajar no tempo" e te deixa preso em um presente de esquecimento.

Mas existe um jeito de "hackear" esse sistema. o método baseado em estímulos naturais que eu desenvolvi foca em sinalizar para o seu cérebro que cada informação é vital.

Ao ativar os mesmos circuitos que o pequeno Jake usa, você transforma sua memória em uma máquina de retenção. Você para de "tentar lembrar" e simplesmente passa a saber.

Agora, eu decidi abrir as portas do meu consultório em uma aula exclusiva onde eu vou te mostrar exatamente como destravar esse interruptor para desenvolver uma super memória, clique em saiba mais e veja.

Gancho: Você sempre esteve certo, o cérebro de um gênio não é normal...(Fundo preto texto em caixa alto em branco bem grade)

Se o crânio de Albert Einstein fosse aberto para uma análise hoje, a descoberta seria chocante. Por décadas, nos disseram que ele era anatomicamente igual ao seu, mas pesquisadores de elite acabam de detectar uma anomalia silenciosa que a medicina tradicional sempre ignorou.

Não se trata de tamanho ou de QI. Mentes como a de Einstein, Isaac Newton, Nikola Tesla ou Elon Musk possuem um "ajuste de fluxo" diferente, um detalhe físico que permite que eles gravem e acessem informações em uma velocidade que parece impossível.

Essa mesma anomalia deveria estar acontecendo dentro da sua cabeça agora. O problema é que o seu cérebro está sofrendo um "bloqueio de segurança" que está, literalmente, sufocando a sua memória e tornando o seu aprendizado lento e frustrante.

Você sente que sua mente está "travada", que esquece nomes ou que lê a mesma frase três vezes sem entender? Isso não é "idade". É o sintoma físico de que o seu interruptor de retenção está desligado.

Um neurocirurgião brasileiro, após 15 anos observando o cérebro humano de perto em centros cirúrgicos, descobriu que existe uma ação mecânica de poucos minutos capaz de romper esse bloqueio e despertar uma Super Memória.

Ele viu, na prática, que o que separa uma mente que definha no esquecimento, de uma mente que se mantém jovem e afiada não é a genética... é a capacidade de aprender mais rápido

Ignorar isso é aceitar que sua história, suas lembranças, quem você é, se apaguem dia após dia.

Ao clicar no botão você verá uma apresentação rápida onde mostro exatamente o que esse médico descobriu e qual é o detalhe físico que você precisa ajustar para recuperar a clareza mental que você sempre deveria ter tido.

O que você vai ver não tem nada a ver com exercícios de memorização ou suplementos... é sobre entender o que está acontecendo por trás dos seus olhos antes que o tempo torne esse silêncio permanente.

Clique no botão abaixo agora.

Gancho 05: Este é o caso mais impossível da medicina moderna: o homem que desafiou o Alzheimer e a atrofia sem ter quase nenhuma massa encefálica.

Corpo: Eu vou te provar isso contando sobre um funcionário público francês que, em 2007, foi ao hospital apenas por causa de uma dor na perna.

Ao realizarem uma tomografia de rotina, os médicos ficaram em choque. O crânio dele estava quase inteiramente preenchido por líquido. Ele tinha perdido mais de 90% da sua massa cerebral devido a uma condição de infância que ninguém havia percebido. Pela lógica de qualquer livro de medicina, aquele homem não deveria sequer conseguir falar, muito menos lembrar o próprio nome.

No entanto, o mistério era ainda maior: ele era casado, pai de dois filhos e exercia um cargo de confiança no governo com total eficiência. Até aquele dia, ele vivia uma vida normal com apenas um "fiapo" de cérebro.

Mas como isso é possível?

A resposta para esse mistério está no que o Dr. Marcelo Roxo, neurocirurgião e ex-professor de medicina, chama de "A Rota de Fuga Neural".

Esse homem não precisava de um cérebro grande; ele tinha construído conexões tão poderosas e resilientes que o pouco tecido que restava trabalhava com a eficiência de dez homens. Ele ativou o que a ciência chama de Reserva Cognitiva.

O problema é que, no estilo de vida moderno, a maioria das pessoas deixa suas conexões principais "enferrujarem". E quando o primeiro sinal de esquecimento ou Alzheimer aparece, elas não têm um plano B.

Após mais de 4.000 cirurgias, o Dr. Marcelo Roxo conseguiu decifrar esse mecanismo e o transformou em um protocolo de 15 minutos que qualquer pessoa pode fazer em casa.

É um método simples que força o seu cérebro a criar "pontes elétricas" novas todos os dias, blindando sua mente contra a atrofia e o apagão mental, sem precisar de remédios ou teorias complicadas.

Não importa a sua idade ou sua genética. Você pode garantir que sua lucidez seja a última coisa a te abandonar.

Os detalhes dessa descoberta e o passo a passo para construir sua própria reserva cognitiva serão revelados agora, em uma apresentação exclusiva na próxima página.

Clique em Saiba Mais e assista agora.

UIGA031 H1 (Marcos) - FacebookDr. Marcelo Roxo

Gancho 01: Ele não nasceu gênio e nunca foi o melhor da classe. Mas hoje, Ben Pridmore consegue memorizar a ordem de um baralho inteiro em apenas 24 segundos.

Gancho 04: Sua mente está lenta? Você sente que demora para aprender coisas novas? Deixa eu te mostrar o que o homem com a memória mais rápida do mundo faz todos os dias.

Gancho 05: Ben Pridmore provou que a super memória é uma habilidade treinável, e o que o Dr. Marcelo Roxo descobriu sobre o método dele vai mudar o seu futuro.

Corpo da copy: Eu vou te provar isso contando a história de Ben Pridmore. Olhando para ele, você veria apenas um homem comum. Ben nunca teve notas brilhantes na escola e nunca se considerou um prodígio.

Mas Ben decidiu testar os limites do cérebro humano. Ele se tornou tricampeão mundial de memória, sendo capaz de memorizar a ordem exata de um baralho completo em meros 24 segundos. Ele consegue guardar na mente milhares de dígitos e nomes em poucos minutos.

O que os cientistas descobriram ao estudar o cérebro de Ben é que ele não tem nenhuma "mutação" genética.

A diferença é que Ben aprendeu a usar o que chamamos de Integração Hemisférica Ativa. Ele treinou o cérebro para transformar dados abstratos em imagens vibrantes, criando uma rede de conexões tão densa que o esquecimento simplesmente não consegue penetrar.

Ele provou que o seu cérebro é como um músculo: se você souber o estímulo certo, ele nunca para de evoluir, independente da sua idade.

O problema é que a maioria das pessoas deixa esse "músculo" atrofiar por falta de uso ou por usar os métodos errados de aprendizado, o que abre as portas para a lentidão mental e o medo do Alzheimer.

O Dr. Marcelo Roxo, neurocirurgião há 17 anos, estudou casos como o de Ben para entender como qualquer pessoa comum, mesmo quem já passou dos 60, pode ativar essa mesma "super-rodovia" de informações.

Ele refinou esse conhecimento em um protocolo de 15 minutos que não exige que você seja um gênio. É um passo a passo para construir uma Reserva Cognitiva tão forte que a sua lucidez e sua memória se tornam blindadas contra o tempo.

Você não precisa aceitar uma mente lenta. Você pode ter a agilidade que sempre sonhou.

O segredo para destravar esse potencial oculto do seu cérebro será revelado agora na apresentação na próxima página.

Clique em Saiba Mais e comece a treinar sua mente hoje.

UIGA019 V1 - H2 - V6 H1 (FELIPE - MARCOS) -

Hook 1:

Riram de mim quando eu disse que qualquer pessoa poderia ter uma super memória e se tornar 200% mais inteligente independentemente da idade

Corpo:

Poucas pessoas sabem disso, mas existiu um homem que foi mais inteligente que Albert Einstein.

Seu nome é William Sidis, ele bateu um QI de 250, exatos 50 pontos a mais que Einstein.

Pra você ter ideia, com um ano e meio ele já lia o jornal, e aos oito anos, dominava oito idiomas. Ele entendia a lógica exata de qualquer informação.

Foi por isso que ele concluiu o ensino fundamental inteiro em um ano, e o ensino médio em só seis semanas. Mas ele terminou a vida com o cérebro todo travado.

O que aconteceu com ele não foi um acidente de percurso.

Foi o resultado de um mecanismo biológico silencioso que pode estar acontecendo com você agora.

Mas por que um cérebro que antes era rápido simplesmente apaga? Por que a palavra some da sua boca no meio da conversa, ou por que você lê uma página e no minuto seguinte não lembra de nada?

Como neurocirurgião há mais de 11 anos, e milhares de cirurgias realizadas, eu descobri o verdadeiro culpado escondido por trás disso.

Esse é o real motivo de você sentir aquela névoa mental e perder o raciocínio em coisas que antes eram automáticas.

Isso gera uma barreira física nos neurônios que trava a sua memória e acelera a rota para doenças graves, como o Alzheimer. O Sidis foi a vítima mais famosa desse bloqueio, e talvez você seja a próxima.

Foi realizando todas essas cirurgias complexas que eu descobri como desarmar esse gatilho.

Existe um processo de neuroativação de apenas 15 minutos por dia que faz o seu cérebro quebrar essa trava e voltar a ser afiado como era antes, e pouquíssimas pessoas sabem disso.

Quando você aprende a desativar essa trava, você não só blinda a sua mente contra o esquecimento, como recupera o controle da sua capacidade.

[Inserir Depoimento 1: Lucia FB]

CTA:

Eu decidi revelar o que é esse efeito silencioso e como você pode desativar ele hoje, em uma apresentação exclusiva e gratuita para quem quer proteger o futuro do próprio cérebro.

Toca no botão aqui embaixo e assiste agora antes que ela saia do ar.

UIGA002 H1 (Abraão-Marcos) - FacebookMeuFluxo

Hook 01: Enquanto a maioria das pessoas mal consegue terminar um único livro por ano... esse homem 'escaneava' 300 páginas em apenas uma hora. E o segredo dele não era o QI, era uma chave biológica que você também pode virar.

Corpo da copy: Muitos chamam isso de milagre, mas a neurociência descobriu algo perturbador: Kim Peek não tinha um cérebro 'maior' ou diferente do seu.

O que eles tinham era uma falha na barreira que separa os dois lados da mente, permitindo que a informação fluísse sem filtros, bloqueios ou interferências.

Como neurocirurgião, eu entendi que essa 'supermemória' é, na verdade, o estado natural do cérebro em Integração Hemisférica Total.

O seu cérebro só parece lento ou esquecido hoje porque ele está operando em 'modo isolado', tentando processar montanhas de dados com apenas uma das mãos, enquanto a outra está amarrada pela sua própria biologia.

A boa notícia é que você não precisa nascer com uma condição rara para acessar essa velocidade de processamento.

Existe um processo capaz de 'destravar' essa comunicação entre seus hemisférios, forçando o recrutamento de áreas adormecidas que tornam o aprendizado e a memorização algo automático, rápido e sem aquele esforço exaustivo que você sente hoje.

Eu decidi trazer essa ciência, que antes era discutida apenas em congressos restritos de neurocirurgia, para o dia a dia de pessoas comuns. Minha missão de vida agora é provar que você não é 'ruim de memória', você só está usando ela do jeito errado.

Eu preparei uma apresentação curta onde mostro exatamente como simular esse estado de integração na sua vida hoje, sem pílulas ou truques mentais. Toque no botão abaixo agora para assistir.

UIGA145

Gancho:

Melhor forma de proteger sua memória contra o Alzheimer? Tomar ômega três? Não. Comer salmão e nozes? Não. Fazer palavra cruzada todo dia? Também não.

Corpo da copy:

Existe uma forma natural de fortalecer o cérebro contra o avanço da doença sem remédio, sem cirurgia e sem mudar a sua rotina inteira.

Eu sei o que é ter alguém com Alzheimer dentro de casa. Eu vejo no consultório, todas as semanas, filhas e esposas que estão cuidando da mãe, do pai, do marido. E que chegam ali apavoradas porque começaram a sentir os mesmos sinais.

A maioria das pessoas acham que o Alzheimer vem da idade, da genética, ou do estresse.

Mas o verdadeiro vilão por trás da doença é o que a ciência chama de placa beta-amiloide. É uma proteína perigosa que se deposita entre os neurônios e com o tempo, formando placas que travam fisicamente a comunicação dentro do cérebro.

Pequenas quantidades desta proteína começam a se acumular silenciosamente anos antes de qualquer sintoma aparecer. Quando o esquecimento começa, esse acúmulo já está em estágio avançado. E uma vez que essa placa endurece, nenhum suplemento consegue dissolver.

Acredite, eu já vi isso em centenas de exames de pacientes ao longo dos meus mais de dez anos como neurocirurgião.

A pior parte é que essa placa, com o tempo, vai sufocando as conexões neurais, forçando o cérebro a trabalhar duas, três vezes mais pra fazer tarefas simples. E se for ignorada, vai piorando lentamente.

Mas aqui está a boa notícia. Você não precisa esperar pra ver. Não precisa de cirurgia, não precisa de tratamento caro, não precisa de medicação pesada.

Existe um protocolo natural de quinze minutos por dia que estimula a comunicação entre os dois hemisférios do cérebro, fortalece a Reserva Cognitiva e cria uma blindagem contra o avanço da doença.

Eu gravei uma apresentação gratuita onde explico exatamente o que fazer e como aplicar o protocolo na sua rotina a partir de amanhã.

O link está aqui embaixo. Basta clicar pra assistir.

Corpo da Copy: Você estuda por horas, e esquece quase tudo? E depois de 40, parece ainda mais difícil, frustrante, certo?

Os próximos trinta segundos vão mudar a forma como você usa a sua mente. Aqui está a verdade brutal.

Se você lê um livro ou assiste a uma aula e esquece tudo na semana seguinte, você não aprendeu absolutamente nada. Você apenas perdeu o seu tempo.

Você está tentando encher um saco que tem buracos nele.

A maioria das pessoas aceita isso. Elas acham que uma memória ruim é permanente ou que é apenas o peso da idade chegando. Isso é uma mentira terrível.

O seu cérebro é como um músculo físico. Se você não o treina com o estímulo correto, ele fica flácido, lento e atrofia. Você precisa de um treinamento cognitivo real.

A exata chave biológica que permite que mentes extraordinárias funcionem no nível máximo. Pessoas como Kim Peek, que memorizava milhares de livros lendo duas páginas ao mesmo tempo.

Casos como o de Jason Padgett, que virou um gênio da matemática após uma pancada na cabeça.

O brilhante artista Stephen Wiltshire, que sobrevoou uma cidade de helicóptero por poucos minutos e depois desenhou cada prédio e cada janela apenas com recurso à memória fotográfica, ou até mesmo Ben Pridmore, o homem comum que grava a ordem de um baralho inteiro em vinte e quatro segundos.

Olha, mas eu não estou aqui para te ensinar a desenhar cidades só com a memória, a ler livros em minutos ou a decorar cartas de baralho. Esse não é o objetivo.

O que eu te mostrar é como estas mentes destravam o funcionamento perfeito do cérebro.

Eu sou o Doutor Marcelo Roxo, neurocirurgião, e eu te afirmo que a solução para isso não é fazer palavras cruzadas. A única saída é um plano de treinamento de inteligência baseado em Integração Hemisférica.

São apenas quinze minutos por dia de estímulos intensos para a sua memória. Não são joguinhos bobos de celular. É treinamento neurológico profundo que você faz em casa.

É o que você precisa para deixar de ser uma peneira que perde informações e voltar a ser uma esponja que absorve tudo. Nomes, números e fatos novos grudam na sua cabeça imediatamente.

Pare de ser a pessoa que sempre tem que pesquisar no celular ou perguntar de novo para confirmar uma informação. Pare de duvidar da sua própria capacidade e volte a ser a pessoa que sabe das coisas com total clareza.

Toque no botão abaixo agora. Assista à minha apresentação exclusiva, siga o plano por quinze minutos diários e desbloqueie o verdadeiro potencial da sua mente.

UIGA106 (FELIPE - MARCOS)

Corpo da copy:

Eu estava assistindo ao youtube algumas semanas atrás e me deparei com o vídeo de um médico que é um especialista em saúde cerebral, o dr Marcelo Roxo, e é loucura, porque ele é um dos maiores nomes nessa área, mas pessoas normais como você e eu normalmente não fariam ideia de que ele existe, mas ele está fazendo uma pesquisa de ponta sobre a memória.

Eu comecei a assistir porque o meu pai vinha tendo problemas com a memória e com um nevoeiro mental. Então, o vídeo era sobre protocolo de integração hemisférica, quando ele disse que era uma rotina de apenas 15 minutos diários, eu fiquei super cética, porque não parecia algo muito revolucionário.

Mas ele explicou que essa técnica desbloqueia uma desintoxicação cerebral natural que elimina produtos químicos neurotóxicos enquanto você dorme.

Veja bem, depois de atuar em mais de três mil e quinhentas cirurgias, o doutor Marcelo roxo descobriu que a perda de memória tem muito menos a ver com o envelhecimento ou com a genética do que a maioria das pessoas pensa.

Em vez disso, ela é causada por cinco substâncias químicas neurotóxicas, esses produtos químicos criam um apodrecimento no cérebro que destrói a sua clareza mental antes de apagar completamente todas as suas memórias.

Eu fiz o meu pai começar a testar essa rotina de 15 minutos por dia, e eu preciso dizer, a vida dele deu uma reviravolta significativa em quase todos os sentidos. todo aquele nevoeiro mental simplesmente foi embora praticamente da noite para o dia. a memória dele voltou mais forte do que esteve em anos.

Se você quiser ver esse mesmo vídeo que eu vi deste dr, vou deixar o link para o vídeo aqui embaixo. ele mostra exatamente o que é esse protocolo de desintoxicação cerebral e como fazer na sua casa e é de graça para assistir!

Então é só clicar no link aqui embaixo

UIGA098 (Samuca-Marcos)

Headline: **Fundo vermelho, texto branco:** Como memorizar

Gancho: Como memorizar uma apresentação inteira da noite para o dia. Tudo o que você precisa são 15 minutos por dia para treinar sua memória, e eu vou provar isso nos próximos 35 segundos.

Eu costumava dar branco durante apresentações, esquecer nomes, reler a mesma página cinco vezes e, ainda assim, não conseguir absorver nada.

No final do dia, eu estava esgotada. Não porque tinha feito coisas demais, mas porque meu cérebro simplesmente não conseguia reter as informações.

Então eu encontrei o Protocolo de integração hemisférica do dr Marcelo roxo

Eu não acreditava que algo tão simples pudesse realmente funcionar.

Mas funcionou.

Pequenos passos diários, no máximo 15 minutos por dia, e de repente eu conseguia lembrar exatamente do que precisava, na hora em que precisava.

Agora eu me preparo para uma grande reunião no dia seguinte em questão de horas, não de dias.

Sem pânico, sem decorar tudo na última hora, apenas clareza.

Basta seguir o plano por 15 minutos por dia e desbloquear mais do seu potencial.

Toque na tela e comece agora.

Jejum 2.0

<https://www.facebook.com/100083650467948/posts/1348599573866961/>

UGC- animação estilo Pixar

CENA 1 — Aniversário, hora da foto

FILHA: "Mãe, vem pra foto!"

CAROL: "Não, não... tira só vocês. Eu tô horrível hoje."

FILHA: "Você fala isso em toda foto..."

(Carol se esconde atrás dos outros)

CENA 2 — Sala, fim da tarde

CAROL: "Amor, você reparou que eu tô diferente?"

MARCOS (sem tirar o olho do celular): "Hã? Tá ótima, tá sim."

(Carol olha pra baixo — ele nem ergueu a cabeça)

CENA 3 — Quintal

FILHO: "Mãe, joga bola comigo?"

CAROL: "Agora não, filho... a mãe tá sem energia nenhuma."

(Ela apaga no sofá; o filho sai cabisbaixo)

CENA 4 — O colapso (frase-âncora)

CAROL (chorando sozinha no carro): "Eu faço tudo certo. Como pouco, me mato de caminhar... e a balança não desce. Por que o meu corpo me odeia?"

CENA 5 — A amiga (na saída da escola)

BIA: "Carol? Tá tudo bem? Você tá chorando..."

CAROL: "Ai, Bia... tô cansada de tentar e nada funcionar. Faço dieta, faço caminhada, e só engordo."

BIA: "Amiga, eu era igualzinha. Até descobrir que eu tava com resistência à insulina — e o pior, o meu exame de glicose dava normal."

CAROL: "Mas se tava normal..."

BIA: "Ela aparece anos antes do exame acusar. O pâncreas solta insulina o dia todo, e com a insulina alta o corpo não queima gordura. Por isso fome e caminhada não adiantavam: eu nunca dava chance do meu corpo queimar."

CAROL: "Meu Deus... é exatamente o que acontece comigo."

BIA: "Tem um nutricionista, o Dr. Lucas. Ele ensina a destravar o pâncreas num vídeo gratuito. Não é dieta, não é passar fome. Foi isso que virou a minha vida."

CENA 6 — A virada (espelha as cenas 1, 2 e 3)

FILHA: "Mãe, você tá linda! Vem pra foto!" (Carol sorri, na frente de todos)

MARCOS (olhando de verdade pra ela): "Você tá radiante, amor. Que energia é essa?"
(Carol jogando bola com o filho no quintal, os dois rindo)

CENA 7 — Boca a boca + escassez (CTA)

VIZINHA: "Carol, você tá ótima! Tanta disposição... me conta o que você fez."

CAROL: "Eu descobri qual era o verdadeiro problema. Te mando o link do vídeo — mas corre, que o Dr. Lucas liberou de graça só por 48 horas."

VIZINHA: "Vou assistir agora!"

CAROL (sorrindo): "Me agradece em 28 dias."

LETTERING FINAL: "Vídeo gratuito liberado por 48 horas. Clica no link e assiste antes que saia do ar."

<https://www.facebook.com/100083650467948/posts/1003100199127090/>

Coma pão com ovo no café da manhã pra disparar a sua insulina por 4 horas seguidas. Mas se você quer dar descanso pro pâncreas — estende o jejum até o meio-dia.

Belisque a cada 3 horas pra manter o glucagon dormindo. Mas se você quer acordar o glucagon, o hormônio que QUEIMA gordura — concentre todas as refeições numa janela de 8 horas.

Tome chá detox pra perder a água que volta no dia seguinte. Mas se você quer queimar gordura armazenada de verdade — ative a autofagia com jejum regenerativo.

Conte caloria pra brigar com a fome a vida inteira. Mas se você quer matar a fome em 72 horas — corrija a insulina alta com ciclagem de carboidrato.

Tome refrigerante zero pra continuar com vontade de doce o dia inteiro. Mas se você quer matar a vontade de doce em 72 horas — corte os adoçantes que enganam o seu pâncreas.

Use Mounjaro pra perder músculo junto com a gordura. Mas se você quer perder só gordura — desperte o glucagon natural que tá dormindo dentro de você.

Olha, eu vejo isso no meu consultório toda semana. Paciente que tenta descobrir tudo sozinho — seguindo dica de influencer que não é nutricionista e nem médico, errando protocolo e travando o corpo em poucos dias.

Por isso eu desenvolvi um caminho que vai direto na raiz: descansa o pâncreas, ativa a autofagia pra limpar as células zumbi que sufocam ele, e desperta o glucagon que tá dormindo há anos. Sem academia, sem suplemento caro, sem caneta.

Eu gravei um vídeo curto explicando o método inteiro. Tá no link aqui embaixo. Assista antes que eu tire do ar.

J20PIG 032 (NICOLAS) -

<https://www.facebook.com/100083650467948/posts/1910855156246346/>

O que a gordura no fígado, a barriga inchada e o seu café da manhã têm em comum?

Quando você entender a resposta, nunca mais vai errar nessa refeição.

Olha como funciona. Durante a noite, enquanto você dorme, o seu corpo entra num jejum natural.

Umas 4 horas depois do jantar, ele para de usar a comida e começa a queimar a energia guardada. E quando essa reserva acaba, ele vira a chave e começa a queimar a sua própria gordura — inclusive a que está dentro do fígado.

Mas no instante em que você toma aquele café da manhã reforçado — pão, café com leite, tapioca — você desliga essa queima na hora. E o corpo volta a estocar gordura pelo resto do dia.

E aqui está a resposta pra aquela pergunta do começo. O que liga a gordura no fígado, a barriga inchada e o seu café da manhã é uma coisa só: a insulina.

Cada vez que você come, o pâncreas solta insulina. E enquanto a insulina está alta, o glucagon, o hormônio que queima gordura, fica desligado. O açúcar que sobra, o seu fígado transforma em gordura e guarda dentro dele mesmo.

Pensa numa esponja encharcada: cada café da manhã errado que você come encharca um pouco mais o seu fígado de gordura.

E é por isso que a barriga incha. Não é só a gordura por fora. É o fígado congestionado, cheio de gordura por dentro, empurrando a sua barriga pra frente.

Os médicos chamam isso de esteatose. E ela avança calada, sem dor nenhuma, até aparecer no exame como uma "sombra no ultrassom". Se ninguém faz nada, ela vai evoluindo — até virar algo sério de verdade.

A boa notícia é que o fígado é o órgão que mais se regenera no corpo humano. Quando você dá o descanso certo pra ele — quebrando o jejum na hora certa, com a combinação certa de alimentos — ele literalmente limpa a gordura de dentro dele e desincha. E a barriga desincha junto.

Eu sou o nutricionista Lucas Mallmann e já vi muita gente reverter gordura no fígado avançada e desinchar a barriga em poucas semanas — incluindo a minha mãe — comendo bem, sem remédio e sem academia.

Eu te mostro o passo a passo completo num vídeo gratuito, inclusive qual horário e qual protocolo combina com o seu corpo. Antes era só pros pacientes da clínica mas liberei pelas próximas 48 horas. Clica no link aqui embaixo e assiste agora, antes que saia do ar.

J20PIG 023 (NICOLAS) -

<https://www.facebook.com/100083650467948/posts/1497882767908808/>

Se a sua barriga não muda nem com dieta nem com academia, talvez seja por causa disso aqui.

Eu não me sentia bem com a minha barriga desde os meus 35 anos. Vivia escondida em blusa larga, evitava vestido justo, e em foto de família eu sempre dava um jeito de ficar atrás de alguém.

Já tentei cetogênica, low carb, contar caloria, abdominal até doer, jejum por conta própria. Nada mudou. Cheguei a achar que era só o meu corpo mesmo, que eu ia ter que aceitar.

Até que encontrei um vídeo que mudou tudo. Era um nutricionista explicando que pra muitas mulheres acima dos 35, a barriga teimosa não tem a ver com caloria ou genética.

O verdadeiro vilão é o pâncreas hiperativo. Ele libera insulina o dia inteiro — esse é o hormônio que MANDA o corpo armazenar gordura.

E ao mesmo tempo, ele inibe o glucagon, que é justamente o hormônio que QUEIMARIA essa gordura armazenada na barriga, nos quadris, no fígado.

Os dois nunca estão ativos ao mesmo tempo. Enquanto a insulina tá alta, o glucagon fica dormindo. Refeição após refeição, ano após ano. Não tem dieta nem academia que tire essa barriga enquanto o pâncreas tá assim.

Eu fiquei meio cética, mas o vídeo dele era gratuito, então pensei: o que eu tenho a perder?

Assisti. Comecei o protocolo no dia seguinte. E nos primeiros dias eu já senti diferença: mais energia, menos vontade de doce à tarde, dormindo a noite toda, acordando descansada. Depois de uns 30 dias, eu comecei a ver coisa que não via há anos. A barriga começou a sair. O anel voltou a girar no dedo. Roupa que tava apertada começou a sobrar.

Olha — eu não virei modelo, não tô falando isso. Mas a diferença é real e eu diminui uns 8cm de barriga em 3 semanas e minha calça saiu do G pro M. Agora consigo me olhar no espelho hoje sem aquela frustração de antes.

Se você tem essa mesma barriga teimosa que não sai por nada, eu não posso recomendar o suficiente o vídeo do Doutor Lucas Mallmann. O método dele chama P.I.G. — Pâncreas, Insulina, Glucagon — e tá tudo explicado no vídeo, sem custo. Clica no link aqui embaixo antes que ele tire do ar.

J20PIG 018 (NICOLAS) -

<https://www.facebook.com/100083650467948/posts/1518400436457234/>

Quem tem gordura no fígado vive menos. E olha o que ajuda a destravar isso.

Você vai precisar de um copo disso aqui com isso aqui. (colocar qualquer ingrediente numa xícara com água só pra chamar atenção)

Ah, mas eu não sei se eu tenho gordura no fígado.

Se você tem barriga estufada, principalmente do lado direito — você provavelmente tem gordura no fígado.

Se você tem isso aqui — axila e virilha mais escurecidas — gordura no fígado.

Essas verruguinhas no pescoço — gordura no fígado também.

Porque todos esses sinais são causados por resistência à insulina. E quem tem gordura no fígado tem resistência à insulina.

Você que tem o fígado doente, olha os sinais: fezes pegajosas, mau hálito metálico de manhã, boca amarga, cansaço o tempo todo, inchaço nas pernas, sono ruim, acorda à noite pra fazer xixi.

Um estudo recente mostrou que reposição de magnésio ajuda a prevenir gordura no fígado. Chá de espinheira santa com cardo mariano também ajuda a tratar — porque o cardo mariano tem *silimarina* que regenera células do fígado.

Mas é claro, você precisa perder peso. E aqui tá o segredo que ninguém te conta.

Existe uma coisa MUITO mais poderosa que esse chá pro seu fígado. Jejum Regenerativo.

E não é qualquer jejum. É um protocolo específico que descansa o pâncreas — porque o pâncreas hiperativo é a real causa do seu fígado encharcado de gordura. Quando o pâncreas descansa, a insulina cai. Quando a insulina cai, o glucagon acorda e queima a gordura armazenada no fígado.

Em poucas semanas, o ultrassom muda. "Esteatose hepática" vira "fígado sem alterações".

Eu desenvolvi um método muito fácil e preguiçoso... Apliquei na minha própria mãe que tinha esteatose grau 3 — reverteu em 4 meses, sem cirurgia.

Quer ver como funciona? Clica em "saiba mais" aqui embaixo. Eu gravei um vídeo curto explicando tudo. Tá no link.

J20PIG 062 (NICOLAS) -

<https://www.facebook.com/100083650467948/posts/1919812572042888/>

CENA 1 — quarto, antes de sair

CAROL 'gordinha': "Amor, eu tô bonita?"

MARCOS (sem tirar o olho do celular): "Tá ótima."

(Carol se olha no espelho, tira o vestido justo e troca por uma blusa larga)

CENA 2 — noite, cama

(Carol se cobre até o pescoço, apaga a luz rápido. Marcos dá boa noite de costas. Um vão de distância entre os dois.)

CENA 3 — Carol acha uma foto do casamento

CAROL (segurando a foto, magra e sorrindo nela): "Pra onde foi essa mulher?"

(uma lágrima)

CENA 4 — colapso (carro)

CAROL (chorando sozinha): "Eu faço tudo certo. Como pouco, me mato de caminhar. E o meu marido nem me enxerga mais. Por que o meu corpo me odeia?"

CENA 5 — a amiga (saída da escola)

BIA: "Carol, você tá chorando..."

CAROL: "Tô cansada de tentar e nada funcionar. Faço dieta, caminhada, e só engordo."

BIA: "Amiga, eu era igualzinha. Até descobrir que era resistência à insulina — e o meu exame de glicose dava normal."

CAROL: "como assim, tava normal?"

BIA: "Ela aparece anos antes do exame acusar. O pâncreas solta insulina o dia todo, e com a insulina alta o corpo não queima gordura. Tem um nutricionista, o Dr. Lucas, que ensina a destravar isso num vídeo gratuito. Foi o que virou a minha vida."

CENA 6 — a virada (espelha 1, 2, 3)

(Carol num vestido justo, radiante)

MARCOS (parando, sem palavras): "Uau... você tá maravilhosa."

(à noite, ele a abraça; os dois rindo. Carol olha a foto do casamento e sorri pro espelho)

CENA 7 — boca a boca + CTA

VIZINHA: "Carol, tanta disposição! Me conta o que você fez."

CAROL: "Descobri o verdadeiro problema. E não foi fazendo nenhuma dieta, exercício ou com canetinha... Te mando o link — mas corre, o Dr. Lucas liberou de graça só por 48 horas."

CAROL (sorrindo): "Me agradece em 28 dias."

LETTERING FINAL: "Vídeo gratuito liberado por 48 horas. Clica no link e assiste antes que saia do ar."

Frequências da vida

FDV011 - C6 - <https://www.facebook.com/100063566889945/posts/3125421520957853/>

Não existe doença incurável, existe corpo intoxicado e desintoxicado. Só isso.

Veja, 90% das doenças só se manifestam em corpos intoxicados, seja por vírus, bactérias, parasitas, metais tóxicos ou pesados, poluição do ar, da água, eletromagnetismo, agrotóxicos, medicamentos e até traumas e emoções deletérias.

O fato é que, até pouco tempo atrás, acreditava-se que era impossível eliminar todas as toxinas do corpo. Por isso, a relação entre envelhecimento e adoecimento era considerada inevitável.

Mas isso mudou.

É possível amadurecer com qualidade de vida, bem-estar e livre de dores, se o seu corpo estiver desintoxicado.

E isso nunca foi tão simples.

Com a evolução da cimatística, o estudo das ondas sonoras, uma nova geração de tratamentos sonoros indolores e eficazes surgiu.

Meu nome é Zayka Capita, sou neurocientista e naturopata, e tenho uma clínica em Brasília, onde atendo pacientes de todo o Brasil e também de outros países.

Depois de muitos anos auxiliando pessoas com as mais diversas patologias e problemas de saúde, descobri e cataloguei as oito frequências sonoras mais poderosas para o corpo e a mente.

Elas são capazes de auxiliar crianças, jovens e idosos a recarregar a saúde das células e acelerar o processo de autocura do organismo.

Preparei uma apresentação completa, onde revelo todos os detalhes sobre como você pode usar estas frequências aí mesmo na sua casa, apenas apertando o play.

Clique no link e assista à apresentação completa para saber mais.

FDV020 - C3 - <https://www.facebook.com/100063566889945/posts/1434032644492808/>

Ele descobriu como explodir células doentes, inclusive cancerígenas, de forma imperceptível e indolor.

Raymond Reif, em 1934, realizou testes clínicos em 16 pacientes com câncer terminal, em parceria com a Universidade do Sul da Califórnia. Em apenas três meses, todos os 16 pacientes estavam curados de forma indolor.

Hoje, mais de 100 mil pessoas já estão acessando este conhecimento, que é bastante difundido na Alemanha, mas pouco conhecido e aplicado no Brasil.

É possível, rápido e simples desintoxicar o corpo e ter mais saúde.

Basta apertar o play e ouvir as frequências da vida.

Clique no link.

FDV017 - <https://www.facebook.com/meufluxocom/videos/1241514971346179>

Você conhece o poder curador das frequências sonoras?

Veja, em 2010 o canadense John Hudson, especialista em bioenergia, ajudou a purificar a água envenenada no Golfo do México após o vazamento de petróleo. A área poluída foi tratada com uma frequência sonora durante 4 horas e na manhã seguinte as águas já estavam claras.

Agora pense comigo: se essa frequência limpou todo um Golfo, imagine o que pode fazer pelo seu corpo, que também é 70% água.

Você também pode apertar o play em frequências sonoras selecionadas pela neurocientista e naturopata Zayka Kapta e fazer uma faxina profunda, desintoxicando seu corpo.

Clique no link.

FDV006 - T3 - <https://www.facebook.com/100063566889945/posts/1116405783888219/>

Riram de mim quando falei que a ponte Tacoma é uma prova do que a ressonância sonora é capaz de fazer para salvar vidas.

Se você nunca viu essas imagens, saiba que o vento neste dia seria incapaz de causar tamanho estrago, pois ele era inferior a 50 quilômetros.

A verdade é que isso só aconteceu porque a exata frequência da ponte foi ativada e, obedecendo à lei da física chamada ressonância, a ponte vibrou, balançou até explodir.

Lembre-se, toda enfermidade tem a própria frequência sonora e quando você descobre e aplica a frequência correta, o mesmo acontece com o vírus, as bactérias, fungos e parasitas. Eles vão vibrar e balançar até explodir.

Meu nome é Zayka Capita, sou neurocientista.

Estudo e aplico frequências sonoras para desintoxicar o corpo não só de metais tóxicos e pesados, inclusive de emoções negativas, traumas profundos e outras enfermidades.

A frequência correta é capaz de desintoxicar completamente todas as glândulas e órgãos do corpo humano enquanto aumenta a imunidade.

Imagina recarregar a energia das células do seu corpo exatamente como você carrega a bateria do celular, só que mais rápido.

Basta apertar o play e deixar que estes 8 sons poderosos façam todo o trabalho por você.

Eu explico como você pode se beneficiar dessa descoberta na apresentação que preparei na próxima página.

Clique no link.

Legendas pela comunidade Amara.org

FDV143 - <https://www.facebook.com/100063566889945/posts/760628306678408/>

A medicina evoluiu tanto que os procedimentos mais modernos estão trazendo esta nova solução para as pessoas que estão com dores e doenças diversas. Estou falando de frequências sonoras que podem auxiliar a desintoxicar o corpo e eliminar parasitas e bactérias, restaurando a saúde das células, sangue e órgãos internos sem você precisar tomar nada.

Neurocientistas e médicos renomados afirmam que é uma poderosa ferramenta no alívio de dores e que os hospitais mais famosos e caros do mundo estão usando isso para diminuir a quantidade de analgésicos em pacientes, no pós-operatório principalmente, e estão obtendo enormes resultados.

No Hospital Reuniti, em Ancona, na Itália, o neurocirurgião Dr. Roberto Tignani realizou uma operação para retirar um tumor duplo na medula espinhal de um menino de 10 anos. Enquanto isso, o biólogo molecular e pianista Emiliano Tosso tocava um piano no centro cirúrgico. O

monitoramento das atividades cerebrais do menino mostrou que ele percebeu a música mesmo sob anestesia total.

Dr. Tignani, chefe da unidade de neurocirurgia, comentou que tudo ocorreu bem e houve uma atmosfera mágica de total harmonia na sala de operações, que foi de extrema importância para o sucesso do procedimento.

O mais surpreendente é que agora você pode usar isso em casa, usando apenas o celular. Isso é uma nova forma de ajudar a desintoxicar o corpo e eliminar bactérias e parasitas que causam dores e doenças, sem que você precise tomar qualquer outra coisa e sem contraindicação.

Basta apertar o play e ouvir as frequências sonoras muito específicas produzidas no meu laboratório, que podem potencializar o efeito dos remédios e até mesmo ajudar você a suspender o uso, se assim o teu médico permitir.

Imagine que na estrada da sua vida você chegou em uma bifurcação. Você pode seguir como está, sem desinflamar o corpo, sem desparasitar, desinfecionar, desintoxicar e cheio de interferências que se acumulam e até impedem de se reconectar com a sua própria natureza.

FDV225 - <https://www.facebook.com/100063566889945/posts/1509821833538416/>

Esses sons têm um poder curativo impressionante.

Em 2010, John Hudson, um canadense especialista em bioenergia, ajudou a purificar a água contaminada no Golfo do México após o vazamento de petróleo, e você não imagina o que ele usou para esse experimento.

Veja, várias medidas foram tomadas para limpar aquela sujeira, e diversos especialistas e cientistas participaram do projeto, mas o que surpreendeu a todos foi que John trabalhou com frequências sonoras específicas, promovendo uma alteração na molécula da água, e aquela água marrom e completamente turva, após receber as frequências certas, ficou verde e clara, e repleta de cardumes, caranguejos e até golfinhos.

Os resultados foram tão impressionantes que em 4 horas já havia uma diferença gritante.

Se essa frequência limpou o Golfo do México, imagine o que fará por você, que tem um corpo composto por 70% de água.

Você também pode apertar o play em frequências sonoras criadas em laboratório pela neurocientista e naturopata Zayka Kapita e fazer uma faxina profunda, desintoxicando seu corpo não só de metais pesados, mas de vírus, bactérias, parasitas e emoções negativas, como traumas e outras enfermidades.

Ela te explica tudo isso na apresentação completa da próxima página.

FDV253 - <https://www.facebook.com/100063566889945/posts/2206296473231039/>

Molécula de água exposta a vibrações positivas. Molécula de água exposta a vibrações negativas. Corpo humano igual a 70% água.

FATO!

As frequências corretas têm a capacidade de desintoxicar e regenerar o organismo.

Clique no link e entenda toda a ciência por trás das frequências da vida.

Quem tem gordura no fígado vive menos. E isso aqui ajuda a tratar. Você vai

precisar de uma colher disso e um punhado

disso. Ah, mas eu não sei se eu tenho gordura no fígado. Se você tem barriga,

você tem gordura no fígado. Se você tem isso aqui, axila, virilha mais

escurecidas e essas verruguinhas, provavelmente você tem gordura no

fígado, porque esses sinais são causados por resistência insulínica. E quem tem

gordura no fígado tem resistência insulínica. Você que tem um fígado

doente, ó, cczinho, mau hálito, boca amarga, fadiga, cansaço, preguiça,

inchaço, pernas inchadas, o sono não é reparador, acorda muito à noite para

urinar. Esse estudo mostrou que quem faz reposição de magnésio tem menos

probabilidade de desenvolver gordura no fígado, mas esse chá ajuda a tratar de

verdade. Mas é claro, você precisa perder peso. Jejum intermitente é uma

estratégia incrível para ajudar em gordura no fígado, resistência

insulínica até na perda de peso. E qual chá que é essa? Como que toma? Como que

utiliza? E esse chá é o chá de espinheira santa com cardo mariano.

Cardo mariano tem cimarina que trata fígado. Só que existe uma coisa muito

melhor que esse chá pro seu fígado para te ajudar a perder peso rápido. Jejum

intermitente metabólico. To para participar de um desafio do jejum

comigo, eu vou montar dieta específica pro seu metabolismo, tabela de

substituição, o que você pode comer, o que você não pode comer. Em uma semana

você consegue perder em média uns 5 kg. Topa participar comigo. Ainda vou fazer

uma análise da sua saúde, você vai receber um diagnóstico médico. Topa?

Então, clica aqui em saiba mais e te vejo no desafio do jejum 57 que vai ser

Surreal.

Ad 2

Olha só isso aqui. Quatro dias separa uma foto da outra e eu perdi 4 kg em 4

dias. E eu vou te ensinar exatamente o passo a passo que eu segui para ter esse

resultado. Para ter esse resultado, você vai precisar seguir esses três passos

que eu coloquei aqui. Primeira coisa que você vai precisar da técnica metabólica

da água e eu vou te ensinar como que faz. Segunda coisa que você vai precisar

da combinação desses três componentes que você acha em qualquer supermercado.

Quando for fazer, tira o saquinho. E a terceira coisa tá relacionada a uma dieta metabólica. Nesse período, eu vou te dar o passo a passo, mas tem uma estratégia mais poderosa que te faz perder uns 5 kg em 7 dias. Essa estratégia é uma estratégia de jejum, que se você fizer em uma semana você consegue perder uns 5 kg mais ou menos. Top participar de um desafio de jejum comigo. Eu vou montar sua dieta, tabela de substituição, o que pode, que não pode, horário, tudo que você precisa saber sobre jejum. Ainda vou fazer uma análise da sua saúde, emitir um pré-diagnóstico médico. Você vai saber todos os seus problemas hormonais. Tudo isso dentro do desafio do jejum. Top para participar? Então, só clicar aqui em saiba mais e te vejo no desafio do jejum que vai ser surreal

Ad 3

Você é mulher, passou dos 40 anos de idade, tá difícil perder peso. Eu sei

que tá difícil. E você tem essas características aqui.

Vou te ensinar como perder peso. Olha só, você precisa de três estratégias

para perder peso rápido. Primeira, não tem como perder peso se você não bebe

água. Tem que beber o mínimo de água. Segundo, tem que ter proteína em todas

as refeições. E a terceira e mais importante de todas, jejum intermitente.

Tem uma estratégia de jejum intermitente metabólico. Você consegue perder 5 kg em

7 dias. Então, [clique aqui](#) para saber mais que eu te passo a estratégia de jejum.

Eu vou ser seu médico por 7 dias. Vou te passar dieta, dieta personalizada pro

seu metabolismo. Vou te passar tabela de substituição, te falar o que pode comer,

o que não pode e eu vou ser o seu médico durante 7 dias. Então [toque aqui](#), saiba

mais para você ter acesso ao nosso desafio do jejum cinco em sete. E ó,

você só precisa de R\$ 9 mês para entrar nesse jejum. Yeah.

Por que que tem pessoas que comem um pão desse e engordam e outras pessoas comem um pão desse e não engordam? Isso acontece por causa de um problema que se chama resistência insulínica. Insulina é um hormônio que sobe quando você come açúcar, massas, pães, biscoitos, bolachas, carboidratos, bebidas açucaradas. E se a insulina sobe muito, você ganha peso rápido. E se eu te falar que existe uma estratégia que você pode colocar o seu pãozinho todos os dias na dieta sem atrapalhar o seu processo de perda de peso, a estratégia é o jejum intermitente metabólico. Porque o jejum é uma das poucas estratégias que na janela de alimentação você pode comer coisas que você gosta. E eu vou te ensinar um jejum que em 7 dias você consegue perder em torno de uns 5 kg na balança. Então é só você clicar aqui em saiba mais que eu vou montar sua dieta, dieta personalizada pro seu metabolismo com tabela de substituição, o que você pode comer, o que você não pode comer e eu vou ser o seu médico nesses 7 dias. E

tudo isso por menos de R\$ 9. Você tem R\$ 9?

Se você tem R\$ 9, [clique aqui](#) para saber mais e te vejo no desafio do jejum, que vai ser surreal.

Ad 5

Sim, eu falo muito de insulina. Insulina é um dos piores problemas para te fazer ganhar peso rápido. Se você tem esses sintomas aqui, a sua insulina é alta e não tem como você perder peso. O grande problema é que insulina é a primeira etapa para você se tornar diabética. Se você tem esses sintomas, a sua insulina é alta. Isso impede você de perder peso e você vai ficar diabética. E tem uma estratégia que trata tudo isso aqui de forma natural. Jejum intermitente, metabólico, não é jejum que você conhece, não. É uma estratégia de jejum te faz perder peso rápido e tratar esse problema. Então, topa participar de um

desafio do jejum comigo, onde eu vou montar sua dieta específica pro seu metabolismo com tabela de substituição, o que você pode comer, o que você não pode comer. Eu ainda vou emitir um relatório da sua saúde, um diagnóstico da sua saúde, dos seus sintomas. Eu vou te analisar. Topa participar desse desafio e perder uns 5 kg em 7 dias, você só precisa de R\$ 67. Você tem R\$ 67? Então clica aqui em saiba mais.

Ad 6

Esse daqui é o verdadeiro os pique da natureza. Essa farinha é cinco vezes mais potente do que o psílium para tirar sua fome. Já esse aqui é o psílium. Ele ajuda a controlar a sua fome e ajuda na saúde intestinal. Essa daqui é a fibra de maçã. Ajuda a regular níveis de colesterol e níveis de glicose. Essa daqui ajuda na libido feminina. É a mistura de maca com marapuama. E essa farinha é uma das poucas que são ricas em magnésio. Vai ajudar no sono, na

energia, na massa muscular, dor no corpo que a farinha de semente de abóbora.

Quer saber o nome desse poderoso inibidor de apetite natural e como que

você utiliza no dia a dia todas essas farinhas? Antes de te falar tudo sobre

as farinhas, o que que você acha de perder uns 5 kg em 7 dias? Top para

participar de um desafio do jejum? Em uma semana eu vou montar o seu jejum, um

jejum progressivo. Em 7 dias você consegue perder uns 5 kg. Eu vou montar

sua dieta, tabela de substituição, quantidade que pode, que não pode comer

sem precisar de atividade física. E eu vou ser o seu médico nessa semana. Topa

participar do desafio do jejum. Então, clica e saiba mais, porque aqui a gente

vai conseguir perder peso e aprender tudo sobre essas farinhas.

Ad 7

Essa mistura é rica e uma substância que vai melhorar seu sono, vai te dar

energia, melhorar seu intestino, ajudar na TPM, diminuir vontade de doce,

aumentar o seu metabolismo. Uma colher de sopa cheia por dia, você vai repor quase tudo que você precisa de magnésio, ômega, vitamina E, ferro, cobre, selênio, folato. E sabe o que que todas essas vitaminas vão fazer com você? vão rejuvenecer sua pele, vão te dar energia à disposição, melhorar cabelo, pele, unha, memória, sono, intestino. Essa mistura é riquíssima em magnésio. E magnésio é muito difícil de achar na alimentação. Então você não vai precisar gastar com isso aqui, com polivitamínico, ômega-3 e magnésio. O medo que vocês têm é o gosto. Será que fica ruim? Vamos ver.

Hum, gente, parece amendoim. E são exatamente essas vitaminas que vão melhorar a sua tireoide, o que vai aumentar o seu metabolismo. Só que existe uma estratégia muito melhor do que essa farinha para te ajudar a perder peso rápido. Topa participar de um desafio do jejum comigo. Em 5 dias nesse desafio, você consegue perder em média uns 5 kg. Eu vou montar sua dieta

específica pro seu metabolismo, tabela de substituição, o que pode comer, o que não pode comer, lista de líquidos permitidos, proibidos, tudo. Eu ainda vou emitir uma análise da sua saúde. Você vai preencher todos os seus sintomas, eu vou fazer um diagnóstico da sua saúde. Topa? Então, só clicar aqui em saiba mais. Te vejo no desafio do jejum que vai ser surreal.

Ad 8

Se você tomar creatina, vai proteger músculo, cérebro, memória e vai te dar mais energia. Se você tomar o E protein, você vai proteger esse músculo, você vai aumentar o consumo de proteína diária e vai ajudar inclusive na flacidez. Se você tomar o long, vai diminuir barriga, vai te desinchar e vai aumentar o seu metabolismo. Se você tomar pílium, vai melhorar a saúde do seu intestino e vai ajudar a controlar o apetite. Se você tomar glucomanano, você vai ter um inibidor de apetite

poderosíssimo. Isso aqui é cinco vezes mais potente do que o Psíum. E como que você toma tudo isso aqui no seu dia a dia? Só que existe uma estratégia melhor do que todos esses suplementos para te fazer perder uns 5 kg em 7 dias, que é o jejum metabólico. Topa participar de um desafio do jejum comigo? Nesse desafio, em uma semana eu vou ser o seu médico. Vou montar sua dieta com tabela de substituição, com quantidade, o que pode, o que não pode comer, horário do que comer. Em 7 dias, além disso, eu vou fazer uma análise da sua saúde. Em 7 dias, você consegue perder em média uns 5 kg. Topa? Então, só clicar em saiba mais e te vejo no desafio do jejum.

Here are seven things that'll make fat loss way easier in 2026. Number one, eat more protein. Protein helps you feel more full. It preserves muscle. It also speeds up your metabolism, and your body even burns more calories digesting

protein than it does carbs or fat. Number two, lift weights more than you

do cardio. Lifting weights helps you maintain muscle mass, which drives fat

loss, makes you burn more calories at rest. And excessive cardio without

strength training increases muscle loss. So, lifting three times a week is key.

Number three, get 7 to 9 hours of sleep per night. Your body is having a hard

time burning fat if it's running on fumes. Poor sleep makes fat loss harder

by disrupting your appetite, your recovery, your hunger regulating

hormones. Number four, walk 7,000 steps a day. Daily walking increases your

calorie burn with a very low recovery cost. So, it's very easy to recover from

and easy to stay consistent with, unlike excessive high intensity cardio, which

can be very hard to sustain for some people. Number five, stop cutting carbs

if you're always tired and binge eating. That's a sign that low carb may not

match what your recovery needs are because some people do well on low

carbs. Others feel better and lose fat more consistently with moderate carbs.

Number six, manage your stress. Chronic stress and elevated cortisol can make

fat loss, especially around the midsection, harder by affecting your

appetite and your sleep and your recovery. And then number seven, find

your starting point. Everyone responds to food and training differently. If

you're not eating and training in a way that actually fits you, progress is

going to be way harder than it should be. And that's why so many people jump

from diet to diet without any kind of results. And so to help you out with

that, I built a 30-second quiz. It's free. Don't need your email or

anything like that. And it takes into account factors like your build and your

recovery capacity, your training history, your lifestyle, and it gives

you a clear starting point for how to eat and train in 2026 so you can finally

get real results. So, click the link below and take the quiz right

Ad 2

Eating nothing but chicken and rice. That's the best way to lose weight, reduce inflammation, lower your blood sugar levels, and balance your hormones, right? Not exactly. I tell my weight loss clients to do something that's much more simple. Check this out. This is what just 10 lbs of body fat looks like.

If we want to drop this, we got to take our metabolism from this to this. This is a metabolism killer. This is a metabolism killer. And even this is a metabolism killer. The sad reality is most people eat these foods every single day and wonder why they can't lose weight. The best way to burn fat and get shredded is not keto, paleo, it's not carnivore, it's not vegan, and it's definitely not super intense exercises like this. That ain't how you lose weight. Cardio burns fat, right? No. Cardio actually burns calories, usually in the form of carbs in the bloodstream that are then replaced with the very

next meal that you do eat and stored as more fat. This is why even when you eat

low calorie foods or you run for an hour a day, you get softer, but you don't

actually lose any weight. And this is one of the biggest reasons why most

weight loss attempts fail within the first 3 weeks. The truth is that

Hollywood's elite actors and actresses, they can get super ripped because they

followed a long ignored technique that was used for generations of bodybuilders

and athletes before steroids were even popular. So, what's their approach?

Well, they ruthlessly cut through the fluff because they have zero time to

waste because their next film role is starting in just a few weeks and so they

can't waste time on the wrong program.

>> Cut out carbs, sugar. It was just not sustainable. Boom. I gained it back so

fast. This time I feel like I've done it the healthy way. I've lost 30 lbs.

Just do it. Just do it. You won't regret it. You're going to see it, too. You're

going to be like, "Dang, I look good." For a while, I just completely cut out carbs. And I realized that was a mistake. After I gave the carbs back, I dropped another 30 lbs.

>> The results I've gotten is absolutely incredible. My abs were completely shredded. Like, now I know why it's called B Shreds. I had that little B cut. Dropped down 18 lbs.

>> You want to know why running on the treadmill 7 days a week doesn't work when you're trying to lose weight? Because aside from the cortisol buildup and the inflammation, it's also just not sustainable. And one of the biggest fitness myths is when people say carbs make you fat. Carbs don't make you fat.

I'm a big donut guy. All these foods that you don't think that you're ever allowed to eat when following a diet, I'm eating them and I'm in the best shape of my life. Carbs actually regulate your metabolism. Carbs are one

of the best ways to give your body and your muscles energy. If you cycle your carbs properly, you eat more carbs than you probably ever have eaten on a diet, and you get far better results than you've probably ever gotten on a diet.

>> I started out at 22.3% and now I'm down to 17% body fat. And I just I can't stop. It's worth it. I promise you it's definitely worth it.

>> I had lost right at 30 lb and my jeans were falling off of me. So, you lost

>> 53 lbs. I went from 189 lb to 136 lb.

>> Dang. What is the best diet or workout for losing weight? The science of weight

loss was cracked a long time ago. It's not a trend. It's just facts. Following

all those trending fat diets, trending workouts you see online are literally a

waste of time. There's already a proven researchbacked way to lose weight and

keep it off. if we already did all the hard work for you to simplify all that

information into a very simple and easy to follow plan that literally anybody

can do. So, this is our body type quiz. It's a free quiz. It's six different questions. Super easy. Takes like literally 20 seconds. You could do it right now. And then at the end of it, it tells you what your body type is, but it also tells you the three most important things to do based on what your body type is. And it's completely free. So, click the link below if anybody's watching and you want to figure out your body type. We won't ask for your email or anything like that. If you guys want to check it out, click that link below, take my free body type quiz, and get your personalized plan right now.

Ad 3

Some people swear by their morning run. Others say it's overrated. What's your take?

>> Cardio is great. Maybe not the smartest choice. Doing more cardio doesn't

necessarily mean you're going to lose more fat. In fact, it might make you

hold on to fat. Steady state cardio can eventually lead to muscle loss.

>> So, if cardio is not the answer, what should people do?

>> Losing body fat can look a bit different for each person, but it all starts with

knowing the right plan for you and one that you can stick to. What is the best

way to lose this central obesity? Some people call it belly fat. I'm gonna

drink lime and ginger water every morning to lose weight.

>> Any other ideas?

>> Thinking about starting to run on the treadmill again.

>> If you believe that to lose central fat, you must cut all carbs, go on a

starvation crash diet, do intense cardio four to five times a week, you better

watch this. Starving ourselves, eating salads, and cutting out carbs. Doing

this never works and only leads to more frustration. You might think this would

take years to learn, but we're going to teach it to you in 60 seconds. Watch this.

>> This is a metabolism killer. This is a metabolism killer. And this is a metabolism killer.

>> Dr. Drew and my wife Susan here. We want to show you something.

>> You've probably seen this guy all over your feed claiming that cutting carbs isn't necessary for weight loss.

>> One of the biggest fitness myths is when people say carbs make you fat. Carbs don't make you fat. I'm a big donut guy.

>> No need for long hours on the treadmill either.

>> If you think that I spend three hours in the gym every single day and all I do is regular steadystate cardio all the time, you're wrong. Now, I know it sounds too good to be true, but let me tell you, there's more to this than meets the eye.

>> The science of weight loss was cracked a long time ago. It's not a trend. It's

facts. Following all those like trendy fat diets, all those trending workouts

that you see online is literally a waste of time. There's already a proven

researchbacked way to lose weight and keep it off.

>> I decided to delve into this topic and do some research. Turns out this guy is

a celebrity trainer who's gained a massive following for challenging

mainstream advice. He claims that what we've been told about weight loss is

wrong. Completely wrong. I've witnessed thousands of clients on Bshred transform

their lives and achieve their best shapes ever by dedicated say 20 minutes

a day to three simple practices. And you know what makes a lot of sense when you

listen to what he has to say. Cardio burns fat, right? No. Cardio actually

burns calories usually in the form of carbs in the bloodstream that are then

replaced with the very next meal that you do eat and stored as more fat. And

this is why even when you eat low calorie foods or you run for an hour a day, you get softer, but you don't actually lose any weight. And this is one of the biggest reasons why most weight loss attempts fail within the first 3 weeks. The truth is that Hollywood's elite actors and actresses, they can get super ripped because they followed a long ignored technique that was used for generations of bodybuilders and athletes before steroids were even popular. So what's their approach? Well, they ruthlessly cut through the fluff because they have zero time to waste because their next film role is starting in just a few weeks and so they can't waste time on the wrong program.

>> Cut out carbs, sugar. It was just not sustainable. Boom. I gained it back so fast. This time I feel like I've done it the healthy way. I've lost 30 lbs.

Just do it. Just do it. You won't regret it. You're going to see it, too. You're going to be like, "Dang, I look good." For a while, I just completely cut out

carbs. And I realized that was a mistake. After I gave the carbs back, I

dropped another 30 lbs.

>> You will never have to be on the treadmill again. I want to say slowly

the weight started coming off, but it came off faster than I thought it would.

>> All these foods that you don't think that you ever get to eat when following

a diet, I'm eating them and I'm in the best shape of my life. Carbs actually

regulate your metabolism. Carbs are one of the best ways to give your body

energy. If you cycle your carbs properly, you eat more carbs than you've

probably ever eaten on a diet, and you get far better results than you've

probably ever gotten.

>> I don't even weigh 210 lbs. You've lost meat. That's insane.

>> I now went from a 6XL. I can now say that I'm in a large.

>> I had lost right at 30 lb. My jeans were falling off of me.

>> So, you lost 53 lbs. I went from 189 lb to 136 lb.

>> Dang. What is the best workout to lose weight? The best way to burn fat and get in shape. It's not keto. a paleo fasting or vegan and it's not super intense workout.

>> That ain't how you lose weight.

>> I already did all the hard work to simplify all that information into a very simple and easy to follow plan that literally anybody can do. This is our body type quiz. That's a free quiz. It's six different questions, legit 20 seconds. You can do it.

>> Yeah, you can do it right now.

>> And then at the end of it, it tells you what your body type is, but it also tells you the three most important things to do based on what your body type is. And it's completely free. Yeah. Click the link if anybody's watching

this want to figure out your body type and I'll show you how to get in shape.

You can hit that link below and take the quiz. We won't ask for your email or

The fastest way to lose weight is this.

>> Throw out the white bread and eat the brown rice. That's the best way to lose

weight and reduce inflammation and lower your blood sugar levels and balance your

hormones, right? Not exactly. I tell my weight loss clients to do something

that's much more simple. Check this out. This is what just 10 lbs of body fat

looks like. If we want to drop this, we got to take our metabolism from this to

this. This is a metabolism killer. This is a metabolism killer. And even this is

a metabolism killer. The sad reality is most people eat these foods every single

day and wonder why they can't lose weight. The best way to burn fat and get shredded is not keto, paleo, it's not carnivore, it's not vegan, and it's definitely not super intense exercises like this. That ain't how you lose weight. Cardio burns fat, right? No. Cardio actually burns calories, usually in the form of carbs in the bloodstream that are then replaced with the very next meal that you do eat and stored as more fat. This is why even when you eat low calorie foods or you run for an hour a day, you get softer, but you don't actually lose any weight. And this is one of the biggest reasons why most weight loss attempts fail within the first 3 weeks. The truth is that Hollywood's elite actors and actresses, they can get super ripped because they followed a long ignored technique that was used for generations of bodybuilders and athletes before steroids were even popular. So, what's their approach? Well, they ruthlessly cut through the fluff cuz they have zero time to waste

because their next film role is starting in just a few weeks. And so, they can't waste time on the wrong program.

>> Cut out carbs, sugar. It was just not sustainable. Boom. I gained it back so fast. This time I feel like I've done it the healthy way. I've lost 30 lbs.

Just do it. Just do it. You won't regret it. You're going to see it, too. You're going to be like, "Dang, I look good." For a while, I just completely cut out carbs, and I realized that was a mistake. After I gave the carbs back, I dropped another 30 lbs.

>> The results I've gotten is absolutely incredible. My abs were completely shredded. Like, now I know why it's called B Shreds. I had that little B cut. Dropped down 18 lbs. You want to know why running on the treadmill 7 days a week doesn't work when you're trying to lose weight? Because aside from the cortisol buildup and the inflammation, it's also just not sustainable. And one

of the biggest fitness myths is when people say carbs make you fat. Carbs don't make you fat. I'm a big donut guy. All these foods that you don't think that you're ever allowed to eat when following a diet. I'm eating them and I'm in the best shape of my life. Carbs actually regulate your metabolism. Carbs are one of the best ways to give your body and your muscles energy. If you cycle your carbs properly, you eat more carbs than you probably ever have eaten on a diet. And you get far better results than you've probably ever gotten on a diet.

>> I started out at 22.3% and now I'm down to 17% body fat. And I just I can't stop. It's worth it. I promise you, it's definitely worth it.

>> I had lost right at 30 lbs. My jeans were falling off of me.

>> So, you lost

>> 53 lbs. I went from 189 lb to 136 lb.

>> Dang. What is the best diet or workout for losing weight? The science of weight loss was cracked a long time ago. It's not a trend. It's just facts. Following all those trending fat diets, trending workouts you see online are literally a waste of time. There's already a proven researchbacked way to lose weight and keep it off. We already did all the hard work for you to simplify all that information into a very simple and easy to follow plan that literally anybody can do. So, this is our body type quiz. It's a free quiz. It's six different questions, super easy. Takes like literally 20 seconds. You could do it right now. And then at the end of it, it tells you what your body type is, but it also tells you the three most important things to do based on what your body type is. And it's completely free. Apple or donut? What's better for weight loss? The apple is going to have a lower

insulin spike than the donut is going to. But if you're craving sweets, then

the apple is not going to give you the satisfaction that eating a donut will.

The simple truth is there's a much easier way to lose weight and keep it.

Eating nothing but chicken and rice. That's the best way to lose weight and

reduce inflammation and lower your blood sugar levels and balance your hormones,

right? Not exactly. I tell my weight loss clients to do something that's much

more simple. Check this out. This is what just 10 lbs of body fat looks like.

If we want to drop this, we got to take our metabolism from this to this. This

is a metabolism killer. This is a metabolism killer. And even this is a

Eating dry chicken and rice is actually killing your fat loss. Here's a terrible

way to lose weight and get in shape. Give up all the foods that you actually

like and instead force yourself to eat nothing but chicken, broccoli, and rice.

This is what just 10 lbs of body fat looks like. If we want to drop this, we

got to take our metabolism from this to this. This is a metabolism killer. This

is a metabolism killer. And even this is a metabolism killer. The sad reality is

most people eat these foods every single day and wonder why they can't lose

weight. The best way to burn fat and get shredded. It's not keto, paleo, it's not

carnivore, it's not vegan, and it's definitely not super intense exercises

like this. That ain't how you lose weight. Cardio burns fat, right? No.

Cardio actually burns calories, usually in the form of carbs in the bloodstream

that are then replaced with the very next meal that you do eat and stored as

more fat. This is why even when you eat low calorie foods or you run for an hour

a day, you get softer, but you don't actually lose any weight. And this is

one of the biggest reasons why most weight loss attempts fail within the

Think I'm gining start cutting carbs. I need to drop my belly fat.

>> Here's the most interesting weight loss fact I learned in the last decade. Back

in the gladiator days, I thought intense workout, strict diet was the only way.

But now I know I was doing it all wrong. This is a visual what 5 lbs of fat looks

like. Want to get rid of this and more? I went on social media and I saw this

guy and I was like, he's in phenomenal shape. His wife is in phenomenal shape.

The next thing I knew is I'm looking here going, wow, how can I actually

figure out how to do this? If you want to drop this, start eating more of

these. Starving ourselves eating salads and

cutting out carbs. Doing this never works and only leads to more

frustration. You might think this would take years to learn, but we're going to

teach it to you in 60 seconds. Watch this.

>> This is a metabolism killer. This is a metabolism killer. And this is a metabolism killer. This is how to get in shape fast. Dr.

Drew here. When it comes to cardio, it's true that it burns calories mainly in the form of carbohydrates free in the blood. But here's the deal. After you work up a sweat, your body tends to replace those calories with your next meal. Steady state cardio can actually release cortisol. Cortisol, of course, is your body's stress hormone, and it's not what you're looking for. It could lead to further muscle breakdown. If you don't like doing steady state cardio, don't do it. Number one, it's not a great way to lose weight, and number two, you're going to hate it. If you hate it and it's not working, you will eventually give up.

>> Dr. Drew and my wife Susan here. We want to show you something.

>> You probably seen this guy all over your feed claiming that cutting carbs isn't

necessary for weight loss. One of the biggest fitness myths is when people say

carbs make you fat. Carbs don't make you fat. I'm a big donut guy.

>> No need for long hours on the treadmill either.

>> If you think that I spend 3 hours in the gym every single day and all I do is

regular steady state cardio all the time, you're wrong.

>> Now, I know it sounds too good to be true, but let me tell you, there's more

to this than meets the eye.

>> The science of weight loss was cracked a long time ago. It's not a trend, it's

facts. Following all those like trendy fat diets, all those trending workouts

that you see online is literally a waste of time. There's already a proven

research-backed way to lose weight and keep it off.

>> I decided to delve into this topic and do some research. Turns out this guy is

a celebrity trainer who's gained a massive following for challenging

mainstream advice. He claims that what we've been told about weight loss is wrong. Completely wrong. I've witnessed thousands of clients on Bshred transform their lives and achieve their best shapes ever by dedicated say 20 minutes a day to three simple practices. And you know what makes a lot of sense when you listen to what he has to say.

>> Cardio burns fat, right? No. Cardio actually burns calories usually in the form of carbs in the bloodstream that are then replaced with the very next meal that you do eat and stored as more fat. And this is why even when you eat low calorie foods or you run for an hour a day, you get softer, but you don't actually lose any weight. And this is one of the biggest reasons why most weight loss attempts fail within the first three weeks. The truth is that Hollywood's elite actors and actresses, they can get super ripped because they followed a long ignored technique that was used for generations of bodybuilders

and athletes before steroids were even popular. So what's their approach? Well, they ruthlessly cut through the fluff because they have zero time to waste because their next film role is starting in just a few weeks. And so they can't waste time on the wrong program.

>> Cut out carbs, sugar. It was just not sustainable. Boom. I gained it back so fast. This time I feel like I've done it the healthy way. I've lost 30 lbs.

Just do it. Just do it. You won't regret it. You're going to see it, too. You're going to be like, "Dang, I look good." For a while, I just completely cut out carbs and I realized that was a mistake. After I gave the carbs back, I dropped another 30 lbs.

>> You will never have to be on the treadmill again. I want to say slowly the weight started coming off, but it came off faster than I thought it would.

All these foods that you don't think that you ever get to eat when following

a diet, I'm eating them and I'm in the best shape of my life. Carbs actually regulate your metabolism. Carbs are one of the best ways to give your body energy. If you cycle your carbs properly, you eat more carbs than you've probably ever eaten on a diet, and you get far better results than you've probably ever gotten.

>> I don't even weigh 210 lbs. You've lost me. That's insane. I now went from a 6XL. I can now say that I'm in a large.

>> I had lost right at 30 lb. My jeans were falling off of me.

>> So, you lost

>> 53 lbs. I went from 189 lb to 136 lb.

You can hit that link below and take the quiz. We won't ask for your email or anything like that. Click the link below this video right now. Take my free body type quiz and get your personalized plan right now.

I didn't know what eggs do to cortisol until I saw this.

>> You probably think that both of these fruits are healthy choices, right?

>> So-called healthy choices are silently sabotaging your energy and making it harder for your body to naturally burn fat.

>> One of the biggest mistakes that people make when trying to lose weight, especially for women, is eating foods that trigger cortisol.

>> And the disturbing truth is many of these foods are common in the American grocery stores while being restricted and banned elsewhere.

>> Cortisol is commonly known as the stress hormone. And when cortisol levels go up in your system, your metabolism goes down.

>> But once you start eating in a way that works with your hormones instead of against them, you can actually flip this whole thing around.

>> One of the fastest and easiest ways to lose weight is by eating foods that have

a high thermic effect. This means they raise your metabolism and burn calories just by eating them. But most people don't take advantage of this. And if you want to know what these foods are that are slowing down your metabolism, I made a free video where I share all of them. So, just click the link below and see what foods to eat and what foods to cut

Ad 11

I didn't realize what chicken does to my cortisol levels until I saw this.

>> You probably think that both of these fruits are healthy choices, right?

>> So-called healthy choices are silently sabotaging your energy and making it harder for your body to naturally burn fat.

Look, the code to losing weight was cracked a long time ago. Gen X are

getting their teenage bodies back.

>> Hey, if you want to get rid of your beer belly in time for summer, check this out.

>> I like to do a lot of cardio to burn some fat.

>> Wrong. And you? How do you plan on losing it?

>> Well, I was planning on trying keto.

>> Wrong. Have you seen this guy? You know, the one that keeps telling us to stop running on the treadmill.

>> Well, you might want to listen to this. If you want to drop this, start eating more of these.

>> People wanting to lose belly fat should stop starving themselves and cutting out carbs. I was on carnivore for about 4 years.

>> No carbs.

>> And I had no problem with it. It suited me nicely. I gained bunch of weight. And

I was like, "Oh my god, I didn't know. I didn't realize that I'd gained a bunch

of weight." Maybe you should forget everything you think you know about

weight loss and listen to what I'm about to share with you. You may think this

will take years to learn, but we're going to teach it to you in 60 seconds.

Watch this. This is a metabolism killer. This is a metabolism killer. This is a

metabolism killer. This is a metabolism killer.

If you're over 40 and running on the treadmill endlessly and eating salads

all day just to lose a few pounds, don't just stop and listen to what I'm about

to tell you.

>> I want to talk to you about something that's been making waves on social media

lately. You've probably seen this guy all over your feed claiming that cutting

carbs isn't necessary for weight loss. No need for long hours on the treadmill

either. Now, I know it sounds too good to be true, but let me tell you, there's more to this than meets the eye.

>> The science of weight loss was cracked a long time ago. It's not a trend. It's facts. Following all those like trendy fat diets, all those trending workouts that you see online is literally a waste of time. There's already a proven researchbacked way to lose weight and keep it off.

>> I decided to delve into this topic and do some research. Turns out this guy is a celebrity trainer who's gained a massive following for challenging mainstream advice. He claims that what we've been told about weight loss is wrong. Completely wrong. And you know what? Makes a lot of sense when you listen to what he has to say.

>> This is what 10 lbs of fat looks like. If you want to drop this or more, you got to take your metabolism from this to this.

Is your body trying to tell you something? The darkness of your outer eye ring, the pinkness of your fingernails, spider veins, your posture, your weight, your face shape, the list goes on and on. And what impacts these biological markers the most comes down to two words: visceral fat. What is visceral fat? Visceral fat can cause inflammation and this can accumulate in the heart, in the liver, in the muscles. Visceral fat is like a direct line to metabolic and cardiovascular disease. And this type of abdominal fat is linked with a higher risk of death.

>> So, how do we get rid of dangerous visceral fat? Well, it's a lot easier than you might think.

>> I've been in the fitness industry for a long time, and I'm still hearing from people about how they want to get in shape or they want to feel young again, but they don't know what to do.

>> Well, it starts with getting rid of visceral fat. And the number one way to do that is through what you eat and how you move. And everyone knows that food choice can help you lose weight, but it can also radically change how you look and feel and perform. The food that you eat directly impacts what kind of fat your body stores and where it stores it. A little bit of that comes down to genetics, but it's also what you eat. Do you know what can happen if you optimize your diet?

>> 2 days ago, I was the lightest I'd been since I was about 23.

>> Wow.

>> I've never really experienced that with other diets. I've really not. I thought

I was getting there with carnivore diet cuz I was like, "Oh, I can do this. I

eat whatever I want. But I just don't eat carbohydrates. I gained 12 lbs.

>> But how can you know what to eat? Well, there's a million different diets out

there, all sending you mixed signals. I want to show you a way of eating that

will help you optimize your results without having to follow some super

strict unbearable diet. And so, if you're ready to stop guessing and start

3:51

knowing, take our quick and easy quiz and discover our sciencebacked approach

to just destroying your visceral fat. And millions of people have already

taken this quiz and are seeing incredible results.

So, this is our body type quiz. It's a free quiz. It's six different questions.

Super easy. Takes like literally 20 seconds. You can do it right now. And

then at the end of it, it tells you what your body type is, but it also tells you

the three most important things to do based on what your body type is. And

it's completely free. And we won't ask for your email or anything like that.

So, if you guys want to check it out, click that link below, take my free body

type quiz, and get your personalized plan right now.

>> Do it. Just get started now. Don't wait. Not tomorrow.

Warrior babe

Poor sleep is directly correlated with your body's ability to lose fat or store

fat. There's four main hormones that have to do with this. Grein, leptin,

insulin, and cortisol. So, what happens when you're sleepd deprived? Your body

thinks you're in flight or fight. It's called a sympathetic state. Naturally,

what happens is your cortisol rises. Your blood sugar comes up to meet it,

and then insulin comes up to meet that. Once your insulin is elevated, your body

cannot or will not use fat for fuel. Your body will not burn fat. Also, what

it does is it raises your ghrein levels. Your grein is your hunger hormone. It

tells your body to seek nutrients, especially highly processed

carbohydrates, which are going to give your brain direct fuel immediately. So

your ghrelin levels go up and as they do your leptin, your satiety hormones go

down. So you're not going to feel satisfied after eating those foods. So

as you can see, sleep deprivation is directly correlated to fat loss and

storing fat, actually gaining fat. Get your sleep. That's why we created the

macro method. 21,000 women have already fired their last diet. And here's the

thing, this whole program costs just 27 bucks. So before you consider spending

another 500 on a trainer who doesn't understand menopause, give this a try

because most of our babes were right where you were before finding us. They

spent hundreds, sometimes thousands, on things that just didn't work. Keto

programs, calorie apps, trainers, and nutritionists who didn't understand what

a woman's body actually goes through in midlife. meal plans collecting dust in a

drawer somewhere. We get it. That's exactly why we built this differently.

For \$27, you're getting 20 video modules, your own metabolic assessment, a macro calculator to give you exact macro targets, so you're never confused. It's a one-time payment for a lifetime transformation. And you're backed by our 30-day Warrior Babe promise. If you don't like it for whatever reason, you can email us and get every penny back. But you're most likely not to need that refund because if you're like most of our ladies, you're going to experience how freeing it can be to stop dieting and start fueling your body. So click the link and we'll help you get started.

I feel great and the amount of food that I'm eating is insane. And now I'm up to 350 carbs a day. And the fact that I'm eating that many carbs and getting these results is crazy. Really, I was a chronic yo-yo dieter before I started Warrior Baby. In 5 to 6 months, I actually had six-pack abs, something I

hadn't seen since my early 30s. I had muscle. I was shredded. I'm eating like 2400 calories right now. If your goal is to decrease body fat, build muscle, and tone up, yet you're following keto, low carb, or intermittent fasting, you'll spend the next 6 to 12 months wondering why you aren't seeing the toned results that you want. These methods focus on the opposite of toning up and will have you looking like a skinnier, fatter version of yourself instead. There are four specific things that I want to share with you that will help you burn body fat, build muscle, and tone up.

>> I'm no longer afraid of carbs. I'm no longer afraid of looking in the mirror.

Not only have my body started to transform, but my mindset things is on another level. These four things are literally how I've helped thousands of women achieve amazing tone bodies.

I have confidence. I am 52. I don't feel 52. I feel healthy. I feel vibrant.

Learn how to fuel my body. And it has been so incredibly amazing. I have never
ever seen the results that I have gotten from any other program. It really,
really has changed my body.

>> Are you tired of guessing what your nutrition needs to be or what workout
program you should be following to burn body fat and to tone up? I guarantee
you're missing four simple things that you can put into action right now. These
four things are what thousands of women are doing to get amazing results that
last forever. See muscle tone and I feel stronger and more confident than what I
have been in the past few years. And I'm eating more food than I've ever been
able to eat before. I feel strong in the gym. I feel confident in my own skin.
have a healthy relationship with food for the first

All this time I thought carbs were the problem.

>> I recently tried keto calorie reduction. Never able to change my body composition.

>> Next new diet would come along and I'd abandon it because it wasn't realistic and then I would just gorge, eat whatever, gain my weight back plus some.

>> Undereating causes you to lose muscle because your body no longer has the fuel that it needs to get through your workouts. I use four simple methods to get in control of my body and the way that it looks for the rest of my life.

No calorie counting, no restrictive dieting, no compromising my health for looks.

I've read recently that 90% of people have parasites.

>> Well, that makes sense because we're in symbiotic relationship with micro,

parasite, and fungus.

>> I've seen so much crazy testimonials, people doing this parasite cleanse.

Anxiety, mood, skin, all this stuff. What's your experience with parasite cleansing?

>> Parasites literally hijack your neurotransmitters. I like to do what the

Native Americans and all the herbalists that walked before me. Chuck some very

bitter herbs down your neck like wormwood, black walnut holes, cloves.

These are well-known antiparasitics. And so I've been doing that for the last 35 years.

>> What I like about it is it wraps them up, suffocates them. So whatever's

inside, heavy metals, mold, cuz they just feed off everything in the body

anyway. It's like the cleanup crew. You don't want that to explode in your body,

which is why a lot of those parasite cleanses are way too harsh.

>> And if you're doing any parasite herbs, you definitely want to make sure that you got chelators and binders to mop them up.

>> You guys, if you want the parasite cleanse, we'll give you a family discount. Click the link below. Get the parasite cleanse. 60-day money back guarantee, too. So, if you do this and you don't experience the results, let us know.

Ad 2

Yep. Round worms, pin worms. 90% of people have worms like this in the body.

They don't even know it. Which is why I recommend a natural foolproof system like the Organifi parasite cleanse. You get the pepign which paralyzes them.

Pumpkin seeds knocks them out as well. Mimosa pudka wraps them up in a little blanket. The binder drags them out of your body with all the toxins that they off gas because they are opportunistic free loaders cleaning up the heavy

metals and the other debris in your body. Add in more fiber, which the

Organifi parasite cleanse helps with that. Flush these little critters out.

You will feel so good. I've seen so many testimonials. People with skin issues

for six plus years healed. All kinds of cool stuff happening. You got to get

these free freeloaders out of your body. The full moon is a perfect time to do

it. Let's go.

Ad 3

You're not pooping worms and that's why you got a gut. Not because you're eating

too much, not because you're even lazy, but because something is living inside

you and it's chemically forcing your liver to store fat around your organs

like a shield. That hard bloat that doesn't move, it's not pizza. It's

inflammation caused by parasitic waste in your body sitting in your bile ducts.

You're not letting yourself go. You've just got some passengers lingering

around running your metabolism. I spent two decades studying this stuff. How to do a full liver elimination, how to get them out of your pathway. There's over a hundred parasites and we put it all into one cleanse from Organifi. Everything you need to flush what's been hijacking your body because once those things are out of you, your liver can actually do its job again. It is your life. The weight that felt permanent starts actually falling off like it hasn't in years. It's the Organifi parasite cleanse. Click the link below and get 40% off right now. You've got 60 days risk-free. If you don't feel better, if you don't see worms, you get your money back.

[Bodyfast app](#)

ad 1

Because fat is food that's stored in your body. Here's the exact way to use

intermittent fasting for weight loss. Every day you stop eating for a specific

time window. There's no calories in your belly, but your body still needs energy.

So, it uses fat as fuel. It just takes a few hours of not eating to flip the

switch to fat burn. To find out what exacting protocol you need, go take the

body fast. No more discipline needed, no more remembering, no more excuses. Take

the body fast test right now and get your fasting

Ad 2

Trigger warning. Eating all day is what's keeping you weak, fat, and

inflamed. Try intermittent fasting. Whenever you fast, your body stops

storing fat and starts burning it without having to lift a finger. No

strict diets, no hunger. You wake up feeling refreshed. You're bouncing with

energy all day. You're productive, lean, strong, confident. Take the body fast

and get the perfect fasting protocol for your body. The app will tell you when to

eat and when to fast. The rest happens automatically. Click the link and take the test right now.

Ad 3

Fasting, the most natural way to burn fat. Whenever you fast, your body stops storing fat and starts burning it without having to lift a finger. No strict diets, no hunger. Your body turns into a fat burning machine. Take the body fast and get the perfect fasting protocol for your body. The app will tell you when to eat and when to fast. The rest happens automatically. Click the link and take the test right now.

Ad 4

I'm 18 hours into my fast right now and I'm feeling dialed in, energized, clear. I know that my body is rejuvenating itself because the Body Fast app tracks what fasting stage I'm in. If you want to take your fasting game to the next

level and get personalized coaching plans, super amazing recipes, converting challenges into goals that are personalized based on your hectic schedule. You know the obvious benefit, losing weight. You're also increasing your energy levels, gaining more restful sleep, endurance of willpower, generating this new idea of who you are and what you're capable of. Just download the Body Fast app and get into what I'm talking about.

Ad 5

To lose fat, you need to burn more calories than you consume. So, you're probably eating too much. Try fasting. You can eat the same foods just at different times. You're going to lose weight. No complicated meal plans, no calorie counting. Just focus on the time. The easiest way to get started is with the Body Fast app. You answer a few questions about your body and then it immediately custom tailor a program specifically for you. Then, all you have

to do follow what the app tells you. Eat when it says you can. Don't eat when it says you can't. Take the body fast test and get your fasting plan.

Ad 6

Here's what will happen if you try intermittent fasting. After one week, my body was getting used to the idea of not eating all the time, less bloated. My energy levels were a little higher. I could tell my body was burning fat as fuel. I could feel a difference. After the second week, the fat was literally melting off my body. I was sleeping better. My skin felt more vibrant. After 4 weeks, I didn't have food cravings anymore. My body was just leaner. I could see it. And other people started noticing. Ultimately, I was in control of my body. Unlike a diet, fasting is a lifestyle. It's something that will keep you healthy for the rest of your life. Take the test and get your fasting plan right now.

Ad 7

Fasting is the ultimate cheat code to stay lean. No diets needed. 16 hours

every single day. No matter what I eat inside this window, my body goes, "Wo!"

No calories, so I start burning fat as fuel. Belly fat, blood fat, all the fat.

Body fast is designed to make fasting super easy for you. Just answer a few

questions about your body and your habits, and it will calculate the

perfect fasting protocol for you. Go take the body fast test and get your

basking plan right

Ad 8

Prove me wrong. Fast for 18 hours a day for the next 30 days. See if you don't

wake up being like, "Wow, I feel really rested." See if you don't experience the

feeling of burning fat while you do absolutely nothing. See if you miss your

cravings. See if you can't enjoy this new version of yourself. See if others

don't notice how you look, feel, and how you're behaving. I challenge you. Get the Body Fast app. Take the test. Just see how you feel in 30 days.

EMMA liver protocol

Ad 1

This is the quickest way to clear out a toxic liver.

>> This one organ can make a woman's belly stick out.

>> This is a liver killer. This is a liver killer. And this is a liver killer. Here

are five signs your liver is desperately crying out for help.

>> Scale won't budge. You don't have a slow metabolism. You have a slow liver.

>> This is the quickest way to clear out a toxic liver.

>> This is a liver destroyer. This is a liver destroyer.

This is a liver destroyer. A clogged liver makes thin women look

fat. Do this to detox your liver fast. Lemon water detoxes your liver, right?

Nope. What about drinking lots of apple cider vinegar? Nope. Do this to flush

out liver toxins fast. Kind of surprising, but things like weight gain,

stubborn belly fat, and low energy are all signs of an overworked liver. Most

people think that if you're fat, it's because you're eating too much and not exercising enough. But that couldn't be further from the truth. Science has shown that calories are a load of crap because at their core, obesity, and overeating are hormonal issues. Let me explain. Your liver basically has a daily limit to the amount of toxins it can deal with. Things like air pollution, dust, pesticides, plastics, makeup, medications, shampoo, the list goes on and on. So, if your liver isn't particularly strong, just those daily toxins alone could already be overwhelming your liver. But how does food fit in here? Well, unfortunately, food is more or less a toxin. So, when you eat food, your body breaks down into smaller pieces that can enter the bloodstream. These pieces are usually amino acids, free fatty acids, or glucose. That part is good. It's how your body gets nutrients. The bad part is when those pieces have nowhere to go. When your liver is overwhelmed with

toxins and can't metabolize your food fast enough, it starts storing everything as fat through a process called denovo lipogenesis. That's because fats can essentially trap toxins so the liver can deal with them later when there's less going on. It's like how we store nuclear waste in concrete barrels and bury them underground. Your body does the same thing. And this system works until it doesn't. Eventually, your liver gets too gked up with stored fat. And when your liver gets clogged with fat, it lowers your liver's daily toxin limit. And when your body is at the point when you've got a visibly flabby tummy, your liver is practically screaming for help. The worst part is that at this point, cutting calories is unlikely to do much of anything. It's because your liver is just too gked up. So, you'll have to seriously slash your calories to even have a prayer of losing anything at all. But even then, any weight dropped would only be temporary at best. That's

because when you slash calories, your body simply adjusts and burns fewer calories moving forward. But if you can't reduce the strain on your liver from toxins, and eating fewer calories only makes things worse, then what's the solution? Well, the first and most important step is to clean out your liver. I'll show you how to do that in just a moment. Step two is to strengthen your liver. And step three is to keep your calories high, not low. One option for doing it is Dr. Gina Sam's 7-second liver reset. And no, it's not another liver detox. I mean, sure, you could try doing a liver detox, but most of them aren't backed by any kind of science. Plus, a lot of them actually make things worse. On the other hand, Dr. Gina Sam, MD, is New York City's top gut doctor and has painstakingly researched ways to give even the most overworked livers a much needed vacation. And I know it might sound weird to say that a gut doctor can help kickstart a lagging liver, but here's the thing. She was one

of the very first doctors to investigate the link between the health of our gut

and excess weight. And during her research, she noticed something strange.

So, it turns out that your gut can predict and directly influence your

liver health. More specifically, there's one type of skinny bacteria that helps

prefilter all the toxins in your gut. The same toxins that your liver would

normally have to filter and likely stores fat. And on top of helping to

reduce your liver's workload so it can begin to detox itself, this skinny

bacteria also tells your body to make its own natural GLP-1. Yes, the same

GLP-1 that's in a lot of popular weight management medications. So that means

less cravings, less food noise, and less stress on your liver. But there's

specific foods that this skinny bacteria thrives on and specific foods that kill

it. And that's why I'm linking Dr. Gina Sam's video below. She'll show you

everything you need to know to get started with her 7-second liver reset as

soon as tonight. That way, you can reset your gut and give your liver the time it needs to flush out that stubborn metabolism, killing sticky fat. So, if you're sick of slow, sluggish metabolism, tap the button below and check out Dr. Sam's 7-second liver reset.

Ad 2

If your cholesterol numbers keep creeping up, it means you need stricter dieting, right? Nope. For almost 15 years, I treated high cholesterol the same way every other doctor does. Cut the eggs, cut the red meat, exercise more, and when that didn't work, prescribe a statin. Then I met Anna. She was 47 years old, the exact same age her father was when he had his heart attack. When I pulled up her labs, her cholesterol was over 300. And before I could even open my mouth, she said, "My dad did everything his doctor told him. He cut the eggs, took his statin every single day, walked 30 minutes every

morning. He did it all for 6 years, and then he dropped dead of a heart attack at 47. She looked at me and said, "So, what are you going to tell me that's any different?" And I didn't have an answer. I remember looking at her and thinking, "I'm not letting her become another patient I see for the next 10 years, doing everything right, and getting nowhere because she'd already watched it fail." That was the moment I stopped repeating the diet, exercise, and statin playbook, and dug deeper into statins, the drugs we prescribe for cholesterol. What I discovered changed everything about how I treat cholesterol. Now, statins don't work in the heart or your arteries like we think. They work on a liver enzyme. And that realization hit me like a brick. Because if high cholesterol was really just a food problem, why would the drug target the liver? Then I saw something I didn't learn in medical school. Your liver produces about 80% of the cholesterol in your blood. your diet only contributes

around 20%. Which means every time I told patients to cut eggs, cut steak, or go vegan, I was fighting the 20% and ignoring the 80%. That's not bad advice.

That's the advice that killed Anna's father. Because it's obvious now

cholesterol isn't a diet problem. It's a liver problem. It's your liver that's

supposed to pull excess cholesterol from your blood and flush it out. So, your

cholesterol stays at a healthy level. But over time, your liver can get

overwhelmed. Years of stress, medications, processed foods,

environmental toxins clog up your liver with toxins and slow it down to the

point it's too sluggish to clear the cholesterol fast enough. So, it just

builds up in your blood. Even if you're eating clean, it's basically like trying

to drain a bathtub with a clogged drain. You can stop the faucet, but until you

unclog the drain, the water just sits there. That is the body. The liver is

like a clogged drain and it gets stuck. I attended a medical conference and met

a top New York City gut health doctor, Dr. Gina Sam. She confirmed what I was

already uncovering and took it a step further. She showed me a simple way to

restore the liver's ability to clear cholesterol naturally without statins,

without extreme diets, and without punishing cardio. Just one simple

7-second method you do every morning. It's called the 7-second liver reset.

And it works by restoring the body's natural ability to clear cholesterol and

toxins from your blood. Anna's been doing it for three months now, and her

cholesterol levels are normal. Energy is back, and for the first time since

losing her dad, she feels like she's not just waiting for the other shoe to drop.

Dr. Sam breaks down exactly how easy and how simple it is to do. So, I put the

link to her short presentation below. If you've been doing everything right and

your numbers are still climbing, you need to see this video till the end.

It's free. You don't have to enter any information or anything. And honestly, I

only wish I'd found it years earlier for my patients. So, click below to watch

Dr.

Ad 3

is the fastest way to drop your cholesterol without statins. Look at

this. Everyone knows your liver filters your blood, right? But what nobody talks

about is this spot right here on your liver. Scientists call it a

clatherinecoated pit, but I call it a cholesterol pit. It's where your liver

grabs LDL out of your blood. And it's exactly where cholesterol control starts

and stops for millions of people. Here's what nobody tells you. Your liver is

actually the smartest organ in your body when it comes to cholesterol. It makes

80% of the cholesterol you need because your cells, your hormones, even your

vitamin D all depend on it. And when there's too much floating in your blood,

your liver uses these pits to pull the excess back in and recycle it. It's a

supply and demand system. Your body has been running perfectly since the day you were born. And the whole system depends on one thing. Whether those cholesterol pits are doing their job. But watch what happens when fat builds up in your liver cells. The fat fills the pits. Once a pit is full of fat, the grabbers inside can't pull cholesterol out of your blood anymore because there's nowhere for it to go. So your liver keeps making cholesterol because your cells still need it, but nothing is pulling the excess back out. And LDL just keeps building up in your blood. See, LDL cholesterol is like the trash in your kitchen. When someone takes the garbage out, the kitchen stays clean. But when nobody takes it out, the can fills up, then overflows, and pretty soon, there's garbage all over your kitchen floor, and that's your bloodstream. That's why you've been cutting back on red meat, giving up your morning eggs, and taking fish oil, and your LDL keeps climbing anyway. Your doctor shakes her head and

says, "Your diet must be off." It's not. Your pits are full of fat. And here's the worst part. Cutting out the foods you love doesn't empty a single cholesterol pit. Statins force your cholesterol number down, but leave the fat clogging your pits, which is why you're stuck taking them for life. And that means living with the muscle pain, brain fog, and fatigue that drive half the people on them to quit. Fish oil and fiber don't touch the pits at all. Nothing actually empties the cholesterol pits so your liver can do its job. And the longer you wait, the worse it gets. Every year, more fat fills the pits, more LDL floats past, and more of it ends up stuck in your artery walls, hardening into plaque year after year until they're 70% blocked. And that's when you feel the first chest pain. Not before. Meanwhile, a fat-logged liver leaves you tired, winded on the stairs, and one bad blood test away from a statin prescription you'll be stuck on for life. So, what actually works? New

York's top gut doctor, Dr. Gina Sam, discovered a simple 7-second morning ritual that finally solves the cholesterol pit problem. First, it clears the fat out of the pits that are already there, so they can start grabbing LDL again within days. Then, it helps your liver build fresh new pits on top of the ones it just cleared, so you have even more cholesterol grabbers working around the clock. The result, your cholesterol drops naturally without statins and your arteries stop taking damage. Dr. Sam has made a short video where she'll show you exactly how to use this 7-second ritual from the comfort of your own home. Click below now to see exactly how to empty your cholesterol pits in just 7 seconds a day. It's just a quick video that shows you exactly what to do. You won't have to put in your email or anything like that. Hey, don't let another day pass while your cholesterol pits stay clogged with fat and your arteries keep taking damage. And don't let these hidden cholesterol

pits keep you staring at a climbing number on every blood test dependent on statins with their muscle pain and brain fog and one bad appointment away from your doctor saying the words nobody wants to hear. Click below now to discover the 7-second solution that's already helped thousands of women finally empty their cholesterol pits and watch their LDL drop naturally.

Most people don't know they have a fatty liver until it's too late. Here are the five warning signs you have a fatty liver. I've been dealing with stubborn belly fat that just started piling on out of nowhere. And when I went down the Google rabbit hole of why, I found out I had a fatty liver. And you might have one, too. Because there's a food we all actually have in our diet that causes the liver to become fatty. And as a result, more and more fat settles around the belly area. But here's the thing. It's not just about the fat on the

outside because the fat you can't see is so much worse. I was on WebMD reading about the five worst things that can happen if you have a fatty liver. The first is something called ectopic fat deposition. This is going to sound gross, but basically your liver has too much fat to deal with. So, it starts spilling out and circulating in your bloodstream, wrapping around organs like your heart, kidneys, and pancreas. And when fat builds up around your heart, it's like putting a tight rubber band around it. You feel winded easily. Your heart races and you think you're just out of shape when what's really happening is fat squeezing your heart muscle, choking off blood flow. When fat wraps around your pancreas, it chokes off your insulin production. Your blood sugar goes haywire and you end up with full-blown type 2. When it wraps around your kidneys, they can't filter toxins from your blood anymore and you feel sick and exhausted all the time. The second worst thing is something called

hepatic encephalopathy. This is going to sound kind of technical, but it's when toxins that your liver should be filtering out start building up in your bloodstream and head straight to your brain where they literally kill brain cells. You'll notice it as forgetting where you put your keys, blanking on someone's name, frequently losing your train of thought, and if it continues, it can cause permanent neurological damage. The next worst thing is called lipotoxicity. When there's too much fat flooding into your liver, those fat molecules don't just sit there. They literally poison your liver cells from the inside and stop it from performing its 500 jobs in your body. This is why people with fatty liver get random symptoms that seem unrelated like itchy, rashy skin, ringing ears, joint pain, and body odor. Okay, this next one is even worse because once it happens, you can't undo it. It's called cirrhosis. This is when the fat in your liver has been sitting there for so long that your

liver tissue starts dying off and getting replaced with scar tissue.

Imagine your liver like a sponge. When it's healthy, it's soft and flexible and

can easily filter toxins from your blood. But with cirrhosis, it's like that

sponge turned into a hard, crusty rock. Blood can't flow through it anymore, so

your blood pressure skyrockets. Fluid starts backing up into your abdomen.

Your belly swells up like you're pregnant, even though you're not. Most

people don't realize they have cirrhosis until they're in so much pain they go to

the ER. But by then it's too late and the doctor tells them their only option

is a liver transplant. The waiting list for liver transplants is 3 years. It's

so long that only 30% of people who need one actually get it in time. Finally,

the absolute worst thing that can happen with a fatty liver is sudden cardiac

death. See, when your liver stops filtering cholesterol and fats from your

bloodstream, those fats start coating the inside of your arteries. Your blood

gets thicker, sludgier. Your heart has to work three times harder just to push blood through your body. And then one day it just gives out. It could happen while you're walking upstairs, playing with your kids or grandkids, or sitting on the couch watching TV. One minute you're fine, the next your heart just stops. By the time the ambulance arrives, it's too late. There's no warning, no chance to say goodbye. You just disappear. That scared the hell out of me when I learned all this. But here's the good news. Your liver is the only organ that can fully regenerate itself. Even if it's chronically damaged, it can heal. After working with hundreds of patients with similar issues, Dr. Gina Sam, MD, realized mainstream solutions like weight loss diets, exercise, even GLP-1 medications don't actually fix the underlying problem. They're like putting a band-aid on a gunshot wound. So, after years of researching, Dr. Sam developed a simple and effective method you can do to clean

and defat your liver. It's not a special diet, medication, detox tea, or anything like that. And because it's all natural, you can do it from home. Best part is when you deffat your liver, the belly fat will also melt away on its own and you'll have a nice slim look and protect your overall health for years to come.

Dr. Sam created a free video presentation. In it, she shares exactly what you need to do step by step. You can easily follow along. Just tap the button below and see how it works.

This is the quickest way to clear out a toxic liver. Take a look at these two liver scans. They're both mine 12 weeks apart. The first liver, fatty, toxic, barely functioning. The second one, clean, healthy, breaking down fats. My secret. I started doing this one simple thing each morning before breakfast before I wound up in the ER. I assume my hanging belly was just me getting older.

Simple fix, right? Diet, exercise, maybe cut back on the margaritas. Turns out I was dead wrong. The scariest part was that I thought I was doing everything right, and my doctor did, too. Every morning, I'd forced down egg whites and spinach, walked two miles a day, rain or shine, cut out sugar completely. Then, when the scale kept climbing, I tried keto, intermittent fasting, and every other fat diet. But my belly kept swelling, the fatigue kept getting worse, and my doctor kept telling me, "Just keep at it. Weight loss takes time." But time is what almost buried me. What my doctor never bothered to mention is that after a certain age, your liver changes how it processes everything. The organ that's supposed to burn fat and detoxify your blood, it gets overwhelmed and fatty. In fact, you can have a dangerously fatty liver even if you're eating perfectly and exercising every day. That's right. Even if you're doing everything your doctor tells you, you could still have a toxic

liver that stores fat instead of burns it, making you exhausted, foggy, and bloated. I learned this the hard way as I watched my health deteriorate, the more I followed my doctor's textbook advice. And by the time a specialist finally took my concerns seriously, the damage was already done. So, I made it my mission to understand why this happened and how to make sure it never happened again. But I need to warn you, what I discovered contradicts almost everything we've been told about weight loss and metabolism. I wish I'd known about this simple reset ritual that could have cleared out my fatty liver and kept me out of the hospital. After 2 months of strict dieting and daily exercise, I was still exhausted, still couldn't think straight, still stuck with a belly that wouldn't budge, and the more healthy food I ate, the worse it got. My belly kept growing. I started getting these weird rashes on my skin, and my breath smelled like death. No matter how many times I brushed,

flossed, or swished. So, I made another appointment with my doctor. I waited 45 minutes for him to order more blood work, check my blood pressure, and tell me the same thing I'd heard a thousand times before. Keep eating clean, exercise regularly, stay hydrated. And when I told him I had already been doing that for months, he told me the same thing I'd heard a thousand times already. Be patient. You'll start losing weight soon. But that weight loss never came. Nobody seemed to care how exhausted and defeated I felt. And no one seemed interested in actually figuring out what was wrong. And when I got too pushy, my doctor patted my hand and said, "Well, dear, you're not in your 20s anymore." I was furious. I wanted to scream, "This isn't just aging. I've been starving myself on your stupid elimination diets for months. I'm exercising. I'm chugging water, and I'm just getting worse and worse, and no one is doing a damn thing about it." But I didn't. I just bit my tongue and told

myself, "He's a doctor. He knows what he's doing." And I kept telling myself that until the day my husband rushed me to the ER because I woke up confused and couldn't remember my daughter's name. It hadn't even been six months, but I'd gained 40 lbs and my liver enzymes were through the roof. My liver was so overloaded with toxins and fat that it had basically stopped functioning properly. I overheard the doctors calling it fatty liver syndrome. And because my liver couldn't filter toxins anymore, all that poison started building up in my bloodstream, affecting my brain, my skin, my entire body. The hepatologist basically told us that eating healthy and exercising doesn't do much for a toxic liver. And that's when I decided I was done messing around with doctors who didn't know enough or didn't care enough to look beyond calories and cardio. So, I started looking for the world's best liver experts. And after a lot of digging, I kept seeing the same name pop up over and over, Dr. Gina Sam.

It turns out she's New York City's top gut specialist. She was also among the

very first doctors to investigate the link between the gut microbiome, liver

function, and stubborn belly fat and one of the very few who specialize in

cleaning out a toxic liver. And according to her, what happened to me is

becoming an epidemic. She says that if you're over 40, even if you're eating

clean and exercising daily, there's a good chance your liver is so clogged

with toxins and fat deposit that it can't burn fat anymore. And if you've

been gaining weight despite doing everything right, well, guess what?

There's a good chance your liver looks like this right about now. Uh, and it's

not because you're eating too many calories or not exercising enough. See,

your liver is supposed to be your body's primary fat burning organ, producing

bile to break down dietary fat and clearing toxins from your bloodstream.

But when your liver gets overwhelmed by medications, processed foods, and

environmental toxins, it switches into survival mode. This is a problem because

when your liver is in survival mode, it stops burning fat and starts storing it

instead, especially around your belly. The fat accumulation literally clogs up

your liver cells, making them sluggish and inefficient. So, your body is

literally trapping fat inside your liver and around your organs, causing that

stubborn belly bulge and chronic exhaustion. And the problems don't stop

there. A fatty, toxic liver also raises your risk of heart problems, causes

blood sugar spikes and crashes, and even messes with your thyroid. And all the

salads, gym memberships, calorie counting, and even weight loss shots are

not going to fix a liver that can't burn fat. That's why Dr. Sam developed what

liver experts now call the liver reset ritual. a safe, natural, and incredibly

effective way to cleanse your liver and reactivate its fat burning ability

without restrictive dieting, exhausting exercise, or any dangerous side effects.

And she just recorded a very brief presentation explaining exactly how this simple morning routine can give you a healthy fat burning liver that melts away stubborn belly fat consistently. So, if you're feeling stuck, if you're dealing with unexplained weight gain despite your best effort, tap the button below this video to see Dr. Sam's morning liver reset ritual. You'll be burning fat again in no time, clearing toxins out of your liver, and you could feel 10, 15, even 20 pounds lighter within the first few weeks. Tap the button below this video to see Dr. Sam's morning ritual

Quickest way to improve cholesterol.

>> If your cholesterol numbers keep creeping up, it means you need stricter dieting, right? Nope. For almost 15 years, I treated high cholesterol the same way every other doctor does. Cut the eggs, cut the red meat, exercise

more, and when that didn't work, prescribe a statin. Then I met Anna. She was 47 years old, the exact same age her father was when he had his heart attack.

When I pulled up her labs, her cholesterol was over 300. And before I could even open my mouth, she said, "My dad did everything his doctor told him. He cut the eggs, took his statin every single day, walked 30 minutes every morning, he did it all for 6 years, and then he dropped dead of a heart attack at 47." She looked at me and said, "So, what are you going to tell me that's any different?" And I didn't have an answer. I remember looking at her and thinking, "I'm not letting her become another patient I see for the next 10 years, doing everything right, and getting nowhere." Because she'd already watched it fail. That was the moment I stopped repeating the diet, exercise, and statin playbook, and dug deeper into statins, the drugs we prescribe for cholesterol.

What I discovered changed everything about how I treat cholesterol now.

Statins don't work in the heart or your arteries like we think. They work on a liver enzyme. And that realization hit me like a brick. Because if high cholesterol was really just a food problem, why would the drug target the liver? Then I saw something I didn't learn in medical school. Your liver produces about 80% of the cholesterol in your blood. Your diet only contributes around 20%. Which means every time I told patients to cut eggs, cut steak, or go vegan, I was fighting the 20% and ignoring the 80%. That's not bad advice.

That's the advice that killed Anna's father because it's obvious now.

Cholesterol isn't a diet problem. It's a liver problem. It's your liver that's supposed to pull excess cholesterol from your blood and flush it out so your cholesterol stays at a healthy level. But over time, your liver can get overwhelmed. Years of stress, medications, processed foods, environmental toxins clog up your liver with toxins, and slow it down to the

point it's too sluggish to clear the cholesterol fast enough. So, it just builds up in your blood. Even if you're eating clean, it's basically like trying to drain a bathtub with a clogged drain. You can stop the faucet, but until you unclog the drain, the water just sits there. That is the body. The liver is like a clogged drain and it gets stuck. I attended a medical conference and met a top New York City gut health doctor, Dr. Gina Sam. She confirmed what I was already uncovering and took it a step further. She showed me a simple way to restore the liver's ability to clear cholesterol naturally without statins, without extreme diets, and without punishing cardio. Just one simple 7-second method you do every morning. It's called the 7-second liver reset, and it works by restoring the body's natural ability to clear cholesterol and toxins from your blood. Anna's been doing it for three months now, and her cholesterol levels are normal. Energy is back, and for the first time since

losing her dad, she feels like she's not just waiting for the other shoe to drop.

Dr. Sam breaks down exactly how easy and how simple it is to do. So, I put the

link to her short presentation below. If you've been doing everything right and

your numbers are still climbing, you need to see this video till the end.

It's free. You don't have to enter any information or anything. And honestly, I

only wish I'd found it years earlier for my patients. So, click below to watch

Dr. Sam's short presentation and see her 7-second liver reset. Now.

Watch what bananas do to your liver.

>> Take a look at these two liver scans. They're both mine, 12 weeks apart. The

first liver, fatty, toxic, barely functioning. The second one, clean,

healthy, breaking down fats. My secret? I started doing this one simple thing

each morning before breakfast. Before I wound up in the ER, I assumed my hanging belly was just me getting older. Simple fix, right? Diet, exercise, maybe cut back on the margaritas. Turns out I was dead wrong. The scariest part was that I thought I was doing everything right, and my doctor did, too. Every morning, I'd forced down egg whites and spinach, walked 2 miles a day, rain or shine, cut out sugar completely. Then, when the scale kept climbing, I tried keto, intermittent fasting, and every other fat diet. But my belly kept swelling.

The fatigue kept getting worse, and my doctor kept telling me, "Just keep at it. Weight loss takes time." But time is what almost buried me. What my doctor never bothered to mention is that after a certain age, your liver changes how it processes everything. The organ that's supposed to burn fat and detoxify your blood, it gets overwhelmed and fatty. In fact, you can have a dangerously fatty liver, even if you're eating perfectly and exercising every day. That's right.

Even if you're doing everything your doctor tells you, you could still have a toxic liver that stores fat instead of burns it, making you exhausted, foggy, and bloated. I learned this the hard way as I watched my health deteriorate the more I followed my doctor's textbook advice. And by the time a specialist finally took my concerns seriously, the damage was already done. So, I made it my mission to understand why this happened and how to make sure it never happened again. But I need to warn you, what I discovered contradicts almost everything we've been told about weight loss and metabolism. I wish I'd known about this simple reset ritual that could have cleared out my fatty liver and kept me out of the hospital. After 2 months of strict dieting and daily exercise, I was still exhausted, still couldn't think straight, still stuck with a belly that wouldn't budge. And the more healthy food I ate, the worse it got. My belly kept growing. I started getting these weird rashes on my skin.

And my breath smelled like death no matter how many times I brushed,
flossed, or swished. So, I made another appointment with my doctor. I waited 45
minutes for him to order more blood work, check my blood pressure, and tell
me the same thing I'd heard a thousand times before. Keep eating clean,
exercise regularly, stay hydrated. And when I told him I had already been doing
that for months, he told me the same thing I'd heard a thousand times
already. Be patient. You'll start losing weight soon. But that weight loss never
came. Nobody seemed to care how exhausted and defeated I felt. And no
one seemed interested in actually figuring out what was wrong. And when I
got too pushy, my doctor patted my hand and said, "Well, dear, you're not in
your 20s anymore." I was furious. I wanted to scream, "This isn't just
aging. I've been starving myself on your stupid elimination diets for months. I'm
exercising. I'm chugging water. And I'm just getting worse and worse. And no one

is doing a damn thing about it. But I didn't. I just bit my tongue and told myself, "He's a doctor. He knows what he's doing." And I kept telling myself that until the day my husband rushed me to the ER because I woke up confused and couldn't remember my daughter's name. It hadn't even been 6 months, but I'd gained 40 lbs and my liver enzymes were through the roof. My liver was so overloaded with toxins and fat that it had basically stopped functioning properly. This is the quickest way to clear out stuck poop.

>> Can't go do this to clear out stuck poop fast. I wish I had known about this

little red candy that could have cleared out my mom's constipation and kept her

out of the hospital. She was getting more gassy and bloated by the day. And

the more fiber she ate, the worse it got. After a week of laxatives and castor oil, she was in so much pain that I just didn't think she was going to make it. So, I got her another appointment with the doctor. We waited 30 minutes for him to press on her bloated belly, ask a few questions, and tell us the same thing we'd heard a thousand times before. Make sure she keeps drinking lots of water, taking her laxatives, and increasing her fiber. If she's in a lot of pain, you can give her some prune juice. And when I told him we'd already been doing that for weeks, he told us the same thing we'd heard from every other doctor. There's nothing else I can do. Just keep giving her water, fiber, and laxatives. She'll have a bowel movement soon. But that bowel movement never came. It felt like my mom was just another number in the medical system. Nobody seemed to care how much pain she was in and nobody seemed interested in helping. The solution was always fiber, water, laxatives. And when

I got too pushy, doctors kept saying the pain was all in her head. I was furious.

But my mom had absolute faith in these doctors. She believed they had her best

interests in mind. She was convinced that after enough tests, these doctors

would finally figure out what was wrong. But her tests always came back normal.

Yet, her excruciating levels of pain were anything but normal. I wanted to

call out these so-called doctors and specialists. I wanted to scream, "This

isn't right. It's not all in her head, and she's been following your stupid

elimination diets for weeks. She's eating fiber, taking your laxatives, and

things are just getting worse and worse, and nobody's doing a damn thing about

it." But I didn't. I just bit my tongue as my mom kept telling herself that

these doctors knew what they were doing. And she kept telling herself that until

the day they put her on the operating table. It hadn't even been a full month,

but her life savings was nearly gone, and she looked 9 months pregnant. There

was no doubt in my mind. Her life was in danger. She was so backed up that her

intestines had stretched themselves out, making it nearly impossible to go. I

overheard the doctors calling it a complete obstruction and a mega colon.

And because she couldn't go, all the toxins and bacteria in her poop kept

spilling back into her bloodstream. The surgeons basically had to cut her open

and scoop out all that fiber they kept telling her to eat. And that's when I

swore I would never let something like this happen to my mom ever again. I was

done messing around with doctors who didn't know enough or didn't care enough

to figure out what was going on. So, I started looking for the world's best gut

doctors. After a lot of digging, I kept seeing the same name pop up over and

over, Dr. Gina Sam. It turns out she's New York City's top

gastroenterologist, aka the best gut doctor in New York

City. And according to her, what happened to my mom is not uncommon. Dr.

Sam served as the director of the very prestigious Mount Sinai Gastrointestinal Motility Center for several years in New York City. She was also among the very first doctors to investigate the link between the microbiome and excess weight and one of the very few who specialize in solving constipation for good. She says that if you're over 50, even if you're pooping every day, you could have up to 20 lbs of stuck poop lining the walls of your colon right now. And if you're pooping less than once a day, well, guess what? There's a good chance your colon looks like this right about now. And it's not because you're not getting enough fiber, water, exercise, or anything like that. See, the muscles that surround your digestive system work by squeezing the food along through your stomach the same way you'd squeeze toothpaste through a tube. But when your gut isn't well, the squeezing process, called peristalsis, slows right down. This is a problem because when peristalsis is slow, the undigested food

doesn't have enough momentum to avoid getting stuck in those twists, turns,

and grooves of the intestines. the stuck food begins rotting away. So, the stuck

food is literally fermenting inside your body, causing bloating and cramping. The

3:51

problems don't stop there, though. Slow paristalsis also dries out the poop

inside your colon, creating a cork that's blocking the only way out. And

all the black coffee, prune juice, psyllium husk, gritty fiber, and

laxatives aren't going to clean out that stuck poop. That's why Dr. Sam developed

what poop experts now call the 7-second poop trick. a safe, fast, and incredibly

effective way to clean out up to 20 pounds of stuck poop without cramping,

squeezing, or urgent mad gashes to the bathroom. And she just recorded a brief

presentation on how this 7-second morning ritual can give you a safe,

comfortable, and beyond satisfying poop every morning from now on. So, if you're

feeling backed up, if you're feeling bloated and constipated, tap the button

below this video to see Dr. Sam's 7-second poop trick now. You'll be

moving things along in no time, clearing stuck poop out of your bowels, and you

could feel 10, 15, even 20 pounds lighter for the rest of the day. Tap the

button below this video to see Dr. Sam's morning ritual

Ad 2

Why does grandma's tummy look pregnant? I can't believe a six-year-old noticed

what multiple doctors missed. Before my mom wound up in the hospital, we all

assumed it was just constipation. Simple fix, right? Fiber, water, laxatives.

Turns out we were dead wrong. And the scariest part was that she really

believed she was doing everything right. But even worse was that her doctors did,

too. Every morning, she'd mix that gritty fiber supplement into water and

force it down. She carried a water bottle everywhere. And she took her

laxatives religiously. Then, when nothing happened, she'd try prune juice,

castor oil, and whatever else her doctor suggested. But her belly kept swelling.

The pain kept getting worse. And everyone kept telling her, "You're doing

everything right." They assured her just give it time. But time is what nearly

killed her. And what none of those doctors bothered to mention is that

after a certain age, your body changes how it processes everything. The muscles

that move poop through your system, they get weaker. Those foods and medicines

that worked in your 30s and 40s can actually cause damage in your 50s and

60s. And for some people, they never even worked at all. But the most

terrifying thing is that you can be severely dangerously constipated even if

you're going every day. That's right. Even if you go every single day, you

could still have pounds of stuck poop in your bowels. I learned this the hard way

as I watched my mom's health get worse and worse the more she followed her

doctor's textbook advice. And by the time a surgeon finally took her

condition seriously, the damage was already done. So, I made it my mission

to understand why this happened and how to make sure it never happened again.

But I need to warn you. What I discovered contradicts almost everything

we've been told about regularity and how to poop. I wish I'd known about this

little red candy that could have cleared out my mom's constipation and kept her

out of the hospital. She was getting more gassy and bloated by the day. And

the more fiber she ate, the worse it got. And after a week of laxatives and

castor oil, she was in so much pain, I didn't think she was going to make it.

So, I got her another appointment with the doctor. We waited 30 minutes for him

to press on her bloated belly, ask a few questions, and tell us the same thing

we'd heard a thousand times before. Make sure she keeps drinking lots of water,

taking her laxatives, increasing her fiber. if she's in a lot of pain, you

can just give her some prune juice." And when I told him we had already been

doing that for weeks, he told us the same thing we'd heard from every other

doctor. There's nothing else I can do. Just keep giving her water, fiber, and

laxatives. She'll have a bowel movement soon. But that bowel movement, it never

came. It felt like my mom was just another number in the medical system.

Nobody seemed to care how much pain she was in, and no one seemed interested in

no time, clearing stuck poop out of your bells, and you could feel 10, 15, even

20 lbs lighter for the rest of the day. Tap the button below this video to see

Dr. Sam's 7-second morning ritual now.

>> I go maybe two times a day now, and I just feel so empty, you know, like and

clean. It's totally transformed my inside. I go to the bathroom on a regular basis. You don't know how freeing that is. just normal elimination instead of sitting there for hours trying not to to make it happen.

>> Within two days I noticed that I was becoming more regular. And as the week went on, I was eliminating every day and it was it felt like for the first time in a long time like just complete elimination. My stomach feels flatter. I definitely have more energy but I think I have more confidence too. After the first week, I started feeling better. It started to impact me right away. I do feel thinner. I feel like I trimmed down in my stomach. I can eat anything I want and going to the bathroom more regularly. And that release just felt so healthy and so good.

>> I'm pooping on a regular basis. My husband says he got his wife back from 30 years ago because I have and I feel good and I can eat anything I

want. It's just amazing.

>> I didn't change my diet at all. When I started, I was

172 lbs. But without trying and getting all of that stuff out of me, I weighed

158 pounds. And I don't feel tired. My wife is like, "We're going to have to

get you some new pants." I look younger. I feel younger. My cramping disappeared.

I got skinnier.

>> The bloating in my stomach has gone down a lot. And once I got regular again, my

stomach started going back down. My waist and stuff got smaller. But it

seemed like that I wasn't really losing in my stomach before I started.

>> I noticed that right away. It affected my digestion. I just felt better. My

body just felt like it was supposed to do. It really healed my digestion

problems. I felt like whenever I use the bathroom, it felt more productive. I'll

just say that.

Watch what magnesium does to your bowels.

>> If you have to wipe more than four times after you poop, here's why. When

hardened poop gets stuck in the grooves of your colon, liquid stool seeps around

it. That's what causes the constant leakage that makes you wipe over and

over, sometimes even leaving embarrassing stains in your underwear.

Medically, this is known as fecal seepage, and it's a sign that you could

have 15 lbs of poop stuck inside you right now, leaking toxins into your

system, bloating your belly, and slowly damaging your gut from the inside out.

So, how do you clear out all that stuck poop before it leads to even bigger

problems? Well, do this to clear out stuck poop fast. Fiber helps you poop,

right? Nope. What about drinking lots of water? Nope. Taking stronger laxatives?

Nope. Do this to clear out stuck poop fast. Kind of surprising, but endless

wiping, constipation, and bloating have barely anything to do with how much fiber you eat, water you drink, or how much movement you get in a day. It actually has to do with a hidden type of bacteria deep inside your gut. As doctors, we refer to it as colon paralyzing bacteria because it stops your colon from contracting properly and causes poop to get stuck. Luckily, there's a simple way to clear out this bacteria once you understand what's really happening. And it's not antibiotics, probiotics, a cleanse, or anything like that. So, here's the deal. When the colon is working the way it's supposed to, it pushes poop out through a squeezing process called peristalsis, the same way you squeeze toothpaste from a tube. However, colon paralyzing bacteria completely disrupt this process. They release a gas that slows and in some cases paralyzes the very muscles responsible for pushing poop through your system. So poop gets stuck instead of being pushed out. Worse, it

clings onto newer poop like Velcro until you've got 10, 15, even 20 lbs of stuck poop inside your colon causing severe constipation and painful bloating. So what do you do? Well, it's not gugging down glasses of psyllium or other fiber because that makes things worse. Because according to New York's top gut doctor, fiber just adds bulk and weight to already stuck poop. And that's like adding more cars to a traffic jam. And it's not laxatives choking down psyllium or drinking lots of water either because none of those things target the real problem, the colon paralyzing bacteria. You got to get your colon unparalyzed and pushing out poop again. If you don't, your constipation keeps coming back no matter what you try. That's why Dr. Gina Sam, a top New York City gut doctor, created her 7-second poop method. She was one of the very first doctors to investigate the link between the health of our gut and excess weight. She's now going to show you her 7-second morning ritual for a satisfyingly full

colon release that anyone can do at home. So, if you're feeling backed up,

if you're feeling bloated or constipated, tap the button below this

video to see Dr. Sam's 7-second poop trick now. It's going to get things

moving along, clearing out the colon paralyzing bacteria, and you could even

feel 10, 15 lbs lighter almost instantly. Don't let another day pass

dealing with constant wiping, embarrassing stains, and that

uncomfortable bloated feeling. Don't let pounds of stuck poop continue leaking

toxins into your system, damaging your gut, stealing your energy, and putting

your long-term health at risk. Tap the button below this video to see Dr. Sam's

7-second poop method.

Watch what magnesium does to your bowels.

>> If you have to wipe more than four times after you poop, here's why.

>> The Mayo Clinic confirms that stuck poop can cause these embarrassing skid marks in your undies. You see, when stuck poop causes a traffic jam in your colon, your bowels become too full. And as the pressure builds up, liquefied stool leaks around the stuck hard poop and stains your underwear. So, how can you clear out all that stuck poop so that you don't have to worry about skid marks anymore? Well, do this to clear out stuck poop fast. Fiber helps you poop, right? Nope. What about drinking lots of water? Nope. Do this to clear out stuck poop fast. Kind of surprising, but diarrhea is actually a form of constipation. Weird, right? Most people think diarrhea and constipation are two different things, but the fact is diarrhea is your body's desperate last ditch attempt to get things moving again. So, even though diarrhea is moving things along, not all of your poop cooperates and comes out. And the most stubborn poop gets left behind, stuck in the grooves of the colon. That

leftover poop acts like Velcro and grabs onto new poop, causing it to pile up.

So, what do you do? Well, it's not gugging down glasses of psyllium or

other fiber because that makes things worse. Because according to New York's

top gut doctor, fiber just adds bulk and weight to already stuck poop. And that's

like adding more cars to a traffic jam. Don't take laxatives, choke down

psyllium, or drink lots of water just to poop every morning. It's not the best

way to unclog stuck poop. There's an easier way. It's called the 7second poop

method, created by Dr. Gina Sam, a top New York City gut doctor. She was one of

the very first doctors to investigate the link between the health of our gut

and excess weight. She's now going to show you her 7-second morning ritual for

a satisfying full colon release that anyone can do at home. So, if you're

feeling backed up, if if you are feeling bloated, constipated, tap the button

below this video to see Dr. Sam's 7se secondond poop method now. It's going to

get things moving along, clearing out your bowels, and you could even feel 10

15 lbs lighter almost instantly. Tap the button below this video to see Dr. Sam's

7second poop method.

>> I go maybe two times a day now, and I just feel so empty, you know, like and

clean. It's totally transformed my inside. I go to the bathroom on a

regular basis. You don't know how freeing that is.

>> Just normal elimination instead of sitting there for hours trying not to

make it happen.

>> Within two days, I noticed that I was becoming more regular. And as the week

went on, I was eliminating every day. And it was it felt like for the first

time in a long time like just complete elimination. My stomach feels flatter. I

definitely have more energy. But I think I have more confidence too. After the

first week, I started feeling better. It started to impact me right away. I do

feel thinner. I feel like I trim down in my stomach. I can eat anything I want.

And going to the bathroom more regularly. And that release just felt so

healthy and so good.

>> I'm pooping on a regular basis.

>> My husband says he got his wife back from 30 years ago because I have

and I feel good and I can eat anything I want. It's just amazing.

>> I didn't change my diet at all. When I started, I was

172 lbs. But without trying and getting all of that stuff out of me, I weighed

158 lbs. And I don't feel tired. My wife is like, "We're going to have to get you

some new pants. I look younger. I feel younger. My cramping disappeared. I got

skinnier."

>> The bloating in my stomach has gone down a lot. And once I got regular again, my

stomach started going back down. My waist and stuff got smaller. But it

seemed like that I wasn't really losing in my stomach before I started.

>> I noticed that right away. It affected my digestion. I just felt better. My

body just felt like it was supposed to do. It really healed my digestion

problems.

>> I felt like whenever I used the bathroom, it felt more productive. I'll

just say that.

This is the quickest way to clear out stuck poop.

>> Can't go do this to clear out stuck poop fast. I wish I had known about this

little red candy that could have cleared out my mom's constipation and kept her

out of the hospital. She was getting more gassy and bloated by the day. And

the more fiber she ate, the worse it got. After a week of laxatives and

castor oil, she was in so much pain that I just didn't think she was going to

make it. So, I got her another appointment with the doctor. We waited 30 minutes for him to press on her bloated belly, ask a few questions, and tell us the same thing we'd heard a thousand times before. Make sure she keeps drinking lots of water, taking her laxatives, and increasing her fiber. If she's in a lot of pain, you can give her some prune juice. And when I told him we'd already been doing that for weeks, he told us the same thing we'd heard from every other doctor. There's nothing else I can do. Just keep giving her water, fiber, and laxatives. She'll have a bowel movement soon. But that bowel movement never came. It felt like my mom was just another number in the medical system. Nobody seemed to care how much pain she was in and nobody seemed interested in helping. The solution was always fiber, water, laxatives. And when I got too pushy, doctors kept saying the pain was all in her head. I was furious. But my mom had absolute faith in these doctors. She believed they had her best

interests in mind. She was convinced that after enough tests, these doctors would finally figure out what was wrong. But her tests always came back normal.

Yet, her excruciating levels of pain were anything but normal. I wanted to call out these so-called doctors and specialists. I wanted to scream, "This isn't right. It's not all in her head, and she's been following your stupid elimination diets for weeks. She's eating fiber, taking your laxatives, and things are just getting worse and worse, and nobody's doing a damn thing about it." But I didn't. I just bit my tongue as my mom kept telling herself that these doctors knew what they were doing. And she kept telling herself that until the day they put her on the operating table. It hadn't even been a full month, but her life savings was nearly gone, and she looked 9 months pregnant. There was no doubt in my mind. Her life was in danger. She was so backed up that her intestines had stretched themselves out, making it nearly impossible to go. I

overheard the doctors calling it a complete obstruction and a mega colon.

And because she couldn't go, all the toxins and bacteria in her poop kept

spilling back into her bloodstream. The surgeons basically had to cut her open

and scoop out all that fiber they kept telling her to eat. And that's when I

swore I would never let something like this happen to my mom ever again. I was

done messing around with doctors who didn't know enough or didn't care enough

to figure out what was going on. So, I started looking for the world's best gut

doctors. After a lot of digging, I kept seeing the same name pop up over and

over, Dr. Gina Sam. It turns out she's New York City's top

gastroenterologist, aka the best gut doctor in New York

City. And according to her, what happened to my mom is not uncommon. Dr.

Sam served as the director of the very prestigious Mount Sinai Gastrointestinal

Motility Center for several years in New York City. She was also among the very

first doctors to investigate the link between the microbiome and excess weight and one of the very few who specialize in solving constipation for good. She says that if you're over 50, even if you're pooping every day, you could have up to 20 lbs of stuck poop lining the walls of your colon right now. And if you're pooping less than once a day, well, guess what? There's a good chance your colon looks like this right about now. And it's not because you're not getting enough fiber, water, exercise, or anything like that. See, the muscles that surround your digestive system work by squeezing the food along through your stomach the same way you'd squeeze toothpaste through a tube. But when your gut isn't well, the squeezing process, called peristalsis, slows right down. This is a problem because when peristalsis is slow, the undigested food doesn't have enough momentum to avoid getting stuck in those twists, turns, and grooves of the intestines. the stuck food begins rotting away. So, the stuck

food is literally fermenting inside your body, causing bloating and cramping. The

3:51

problems don't stop there, though. Slow paristalsis also dries out the poop

inside your colon, creating a cork that's blocking the only way out. And

all the black coffee, prune juice, psyllium husk, gritty fiber, and

laxatives aren't going to clean out that stuck poop. That's why Dr. Sam developed

what poop experts now call the 7-second poop trick. a safe, fast, and incredibly

effective way to clean out up to 20 pounds of stuck poop without cramping,

squeezing, or urgent mad dashes to the bathroom. And she just recorded a brief

presentation on how this 7-second morning ritual can give you a safe,

comfortable, and beyond satisfying poop every morning from now on. So, if you're

feeling backed up, if you're feeling bloated and constipated, tap the button

below this video to see Dr. Sam's 7-second poop trick now. You'll be

moving things along in no time, clearing stuck poop out of your bowels, and you

could feel 10, 15, even 20 pounds lighter for the rest of the day. Tap the

button below this video to see Dr. Sam's morning ritual

Watch what stuck poop does to your bowels.

>> If it hurts to poop, here's why. Watch what magnesium does to stuck poop.

Between Mirax and Metamucil, which one do you think dissolves stone poop?

Neither. I have some information about fecal stones that might be news to you

and a 7-second trick that actually works. If you've been backed up for more

than 2 days, your poop is literally turning to stone. I'm serious. It's

called stone poop syndrome, and here's how to stop it. Most folks are totally

wrong about what's causing constipation, and it's not their fault. Because a

discovery made by a top NYC gastroenterologist shocked even the

most experienced digestive health physicians. She found that the real

issue isn't just being backed up. It's something far more insidious. A process that starts in your colon and silently works its way deeper into your digestive tract. By the time you reach midlife, it affects up to 35% of women and 20% of men. It's called fecalith, meaning fecal stone. But gut specialists have a more accurate name for it, stone poop syndrome, because that's literally what happens. Stone poop syndrome turns poop hard as stone. Think about that for a second. Your poop, which should be soft and passable, is literally becoming as hard as the bones in your body. And it happens without any warning signs. Because by the time most people discover they have stone poop syndrome, their colon is already severely blocked. Their intestinal walls are already under extreme pressure, and their body is already struggling. In fact, if you're 45 or older, straining to pass this stone poop could even kill you, which means you could be just moments away from a stroke. Or the scary part,

traditional approaches don't address stone poop syndrome at all. Taking fiber

doesn't help. Fiber just adds bulk to already stuck stone poop, making it hard

to pass. Drinking more water won't reverse it. Even magnesium and

laxatives, they don't touch the root cause. That's why top NYC

gastroenterologist Dr. Gina Sam started researching this hidden threat. And what

she discovered is remarkable. An easy at-home ritual that can help clear out

stone poop, improve energy, and support regular elimination. All you need is 7

seconds each morning. And it's so safe and effective, anyone can do it from the

comfort of their home, no matter your age or current situation. Dr. Sam just

posted a free video explaining how her DIY morning protocol works. Click below

to see Dr. Sam explain how it can help keep your poop soft and smooth well into

your 50s, 60s, 7s, and beyond. Don't wait until your poop becomes as hard as

concrete. Dr. Sam's easy once daily poop clearing method is already helping

thousands of folks avoid the very real dangers of stone poop syndrome and feel lighter, more energetic, confident, and in control of their health. Click the button below to watch Dr. Sam's quick presentation now. The information in this video is too important to miss and there's no telling how long it will remain online.
